Call for Participation

COMPSAC 2017 will provide a forum for in-depth presentations and discussions of the technical challenges, successes, and failures of moving from traditional, person-centered and directed activities and services to those that are the focus of autonomous systems. Sessions will include topics and issues related to autonomous computing, wearable computing, the internet-of-things, social networking, cross-domain data fusion, privacy, security and surveillance, cloud computing, big data, physiological computing, self-aware and self-expressive systems, adaptive learning and teaching, and emerging architectures and network issues that affect all these developing technology-driven innovations. Full details on the COMPSAC 2017 technical program are available at https://www.computer.org/web/compsac2017.

Registration is required. Day pass options are available. Student participants may register at a discounted rate. Please visit our travel and hotel page for information about hotel room discounts for COMPSAC participants.
