procedures in the default options of these graphics software packages. Call this, if you wish, a suggestion for the creation of standardized procedures. More importantly, recognize that it is nothing more than encouraging the use of an effective graphic vocabulary. When we appropriately present information, we can be more certain that it will be communicated and understood, and will thus provide an adequate basis for decision-making.

Acknowledgments

This work was supported in part by funds from the General Research Fund of the University of Kansas. Robert Aangeenbrug, John Hutchinson, Nancy Johnston, and Joseph Poracsky provided comments on the manuscript. Laura Poracsky assisted in the preparation of the illustrations.

References

George F. McCleary, Jr., is a cartographer. He is an associate professor in the Department of Geography at the University of Kansas, where he will hold an intra-university professorship in the Department of Design during 1983-1984. He holds a bachelor's degree (geography) from Yale University and a master's and doctoral degree from the University of Wisconsin (geography and cartography).

He has taught at Clark University (1966-1974) and at the University of Kansas.

McCleary is a member of the American Congress on Surveying and Mapping and the Association of American Geographers. His interests lie in all aspects of map making and map use, but particularly in graphic design. His current research includes the study of various problems in map perception and cognition, concentrating on the adaptation of experimental psychophysics to the study of cartographic problems.
