ARTICLES

9 Extending Solid Modeling Systems for Mechanism Design and Kinematic Simulation
Robert B. Tilove

Already operational in General Motors' GMSolid system, this technique can be implemented in most current geometric modeling systems.

21 Simulating Electromagnetic NDT Probe Fields
Nathan Ida and William Lord

Using computer graphics and film technologies, engineers can now numerically model the nondestructive testing technique that detects flaws in the pressurized steam pipes of nuclear power plants.

33 A High-Level Recognizer for Schematic Diagrams
Douglas S. Tudhope and John V. Oldfield

This recognizer uses high-level knowledge stored in a global, modifiable database. It is adaptable to a variety of diagrams.

43 Computer Graphics Displays: Windows for Process Control
Charles R. Berg

Augmenting conventional panel boards in operations control rooms, graphics displays let plant operators "see" the condition of any unit in a processing system.

58 Shape-Preserving Planar Interpolation: An Algorithm
Harry W. McLaughlin

If a computer and a draftsman are asked to draw a curve through identical planar data, the draftsman's curve frequently looks better. Must it be this way?
