Terminals from CIE Terminals give you a family of graphics any way you like.

At a price you're going to more than like.

The most inexpensive way: Add an all-new, high quality monochrome CIG-201 plug-in graphic card to a CIT-101.

Next most inexpensive way: Add a CIG-261 plug-in card to a CIT-161 for either monochromatic or color graphics.

Next most inexpensive: (And we're still talking under $1,900) a monochrome CIT-414. And next, a CIT-427 that allows you to display eight different colors from a 64-color palette.

Now, let's back up a moment.

All are Tektronix® compatible. All give you crisp dot resolution—640 x 240 for the CIG-201, 640 x 480 for the others. All have a built-in cross-hair cursor.

All have an addressable plot area of 4096 x 4096 in the Tektronix mode. All give you five types of vector variation.

All are compatible with most major graphics software packages, including DISPIA® and PLOT 10. So all give you great flexibility for business, design and scientific applications.

The difference between these terminals and others with comparable features is that the others aren't comparably priced.

CIE Terminals have been tested as thoroughly.

Graphic stand-alones that stand alone in price and performance.

They have been proven in use by as many companies. And they have been performing at a level far exceeding their price for years.

They're perfect examples of our continuing commitment to the graphics world: the highest level of quality and performance at a reasonable price.
