Now your computer can have 20/20 vision.

Datacube products give your Multibus or Q-Bus system video capability... economically.

Datacube products aren’t your run-of-the-mill graphics products. These frame grabbers are built for performance... with high resolution and a host of other extra features. They digitize and display information in real time. And without host computer intervention.

The new VG123 is a good example. Resolution is 768H x 512V x 8 bits/pixel. Black and white or pseudo-color, RAM-based input and output translation tables, an alphanumeric overlay plus pan and scroll capabilities are only a few of its advantages.

Datacube products provide reliable vision for robotics, medical imaging, surveillance, inspection, teleconferencing, animation, etc. And at surprisingly low prices.

Call or write for our new Product Guide of Multibus and Q-Bus Compatible Boards. Datacube Incorporated, 4 Dearborn Road, Peabody, MA 01960, Tel: (617) 535-6644.
