What's the difference? The basic philosophy behind each plotter design. Their plotters trade off speed for one-time economies of smaller size, lighter weight, less powerful components. You pay the price in plotting time with each pen and paper movement (their 24-ips maximum vs. CalComp's 42-ips) and each excursion of the single-pen carriage to a side-mounted carousel.

CalComp's Model 945 and Model 965 plotters, by comparison, allow you to map up to 16 logical pens to four physical pens continuously poised over the plot surface—ready to be activated.
in a fraction of a second. If more than four pens are needed, the plotter performs an automatic stop and prompts the operator to change pens.

Plus the user-friendly control panel provides local control and plot manipulation with easily understood English language messages.

The same interactive firmware gives the operator complete control over plot parameters. Training time is all but eliminated.

Your CalComp Model 945 or Model 965 plotter starts delivering high-speed plots the day it is installed, without changing a line of industry-standard software. Industry-standard because it was developed by CalComp—world leader in computer graphics and CAD/CAM.

So write or phone today for your illustrated copy of "The Plotter and the Reader Service Number 17

Plodder," Compare the performance specifications. Then make your own move into the fast track of plotter technology—
