transparency. We expect the terminal to find successful applications in a number of areas, including CAD, training simulators, and animation.

References

Akira Fujimoto, formerly Wieslaw Romanowski, is a chief engineer with the Software Research Division of the Graphica Computer Corporation, a company that produces computer graphics and image processing systems. His research interests include computer graphics for raster-scan devices, applications of computer graphics in scientific and engineering analysis, and CAD.

Fujimoto received an ME in mechanical engineering from the Technical University Szczecin (Poland) and from the University of Tokyo, where he subsequently obtained his PhD. He is a member of the Society of Naval Architects of Japan, the Computer Graphics Society (GCS), and the GKS Japan Committee of GCS.

Christopher G. Perrott is a software engineer with the Software Research Division of Graphica Computer Corporation. Previously, he has worked on airline reservations software, radar systems, and process control in Europe and North America. His present interests include software and hardware for computer graphics systems.

Perrott received a BA and an MA in physics from Oxford University.

Kansei Iwata is president of Graphica Computer Corporation, which he founded in 1975. From 1970 to 1975, he was employed by Iwatsu Electronic Company, Ltd., where he was the chief of the Electronic Circuit Research Laboratory at the Technical Institute in 1974 and 1975. His research interests are related to pulse transmission and electronic circuit design.

Iwata received his BA and PhD in electrical engineering from Tohoku University in Sendai, Japan. He is a member of the IEEE and the ACM.

The authors' address is Graphica Computer Corporation, 6-21-6 Nagayama Tama-shi, Tokyo 206, Japan.

Additional reading

Cost-effective, reliable filter solutions to RFI/EMI problems

LMI manufactures a broad line of high performance, long life power and communications line filters, filter panels, and power factor correction networks. These are now widely used in shielded rooms, data processing centers, communications centers, hospitals, ground support facilities, shielded cabinets and other secure or RF controlled areas. Our power line filters are designed and manufactured to MIL-F-15733E, UL and other specs; our communications line filters exceed MIL-STD-HBK-232. All models have standard power systems, voltages, current and frequency ratings for easy interface with circuit breakers and UL and NEC requirements.
