Today there's a low-cost plotter that uses the newest technology to produce the most complex plots with the same speed, accuracy and flexibility typical of the most expensive plotters. It's from Numonics and we call it the #5600. It's not low-cost construction. It's sturdy. It's durable. It's absolutely reliable.

It's fast. The #5600 plots at speeds up to 250 mm per second. The grit-roller transport system produces a smooth, accurate, controlled plot on cut sheet paper or mylar. A new synchro-belt drive is used for quiet, accurate, maintenance-free pen position control.

It's flexible. Accepts paper sizes from C to D and under HOST control automatically selects any of four self-capping, magazine-loaded pens of any choice.

It has available one of the widest selections of command functions on the market today. We have the capability to emulate the language that integrates into your system.

We're reliable. Our reliability is based on manufacturing control and inspection, a comprehensive documentation system and complete traceability, all of which ensures a zero-defect product. It means superior construction and customer support. Take note and call us today.
