Now for the first time, one terminal gives you the mobility to draw on an entire universe of graphics software—both PLOT 10 and ReGIS—plus full ANSI text-editing!

Introducing Qume's new QVT 311GX, the only monochrome graphics terminal that offers full compatibility with both Digital's VT 125 and Tektronix' 4010/4014 series...for substantially less cost than either! The QVT 311GX provides full bit-mapped graphics on a 14" non-glare white phosphor screen, with four shades of gray. There's an optional mouse device as well.

As with all Qume terminals, the QVT 311GX is engineered to the highest standards of performance and reliability, and backed by our experience and resources as an ITT company. So whatever moves you make in the years ahead, you know we'll be there with expert service and technical support.

For more information about the QVT 311GX and Qume's other graphics and alphanumeric terminals, or our full line of daisywheel printers and disk drives, call (800) 223-2479.

Or write Qume Corporation, 2350 Qume Drive, San Jose, CA 95131.
