APOLLO FREES THE THOUSANDS OF ENGINEERS BEING HELD POWERLESS BY THEIR PERSONAL COMPUTERS.
The personal power shortage is over. Introducing the Apollo DOMAIN® Series 3000. A family of personal workstations that are priced like PCs, packaged like PCs, easy to use like PCs. Yet they perform with the authority of machines twice the size and three times the price.

Consider their raw power. Despite the fact that DN3000s fit comfortably on the corner of your desk, they have room inside for a 32-bit, virtual memory engine that includes a Motorola 68020 and 68881 floating point chip. Sufficient force to deliver processing speeds that overwhelm the IBM PC.

Their processing proficiency is equalled only by their graphics. A monochrome DN3000 exhibits 1280 x 1024 resolution on a 19-inch monitor. While a color version, with its four-bit planes, displays 16 colors simultaneously on a high-resolution, 15-inch flicker-free screen. While such qualities alone are cause enough for celebration, the DN3000s were notably designed with an understanding that technical professionals work as much with each other as they do with their workstations.

Hence, like all Apollo workstations, DN3000s inherently let you transparently share information and resources across a high-speed local area network.

An IBM PC/AT®-compatible bus assures the ability to integrate options into the system. And an open architecture supports such industry standards as UNIX® and ETHERNET®, providing easy access to computer systems made by IBM® and DEC®.

The DOMAIN Series 3000. In monochrome from under $10,000. In color from under $15,000. Prove that it doesn’t take a lot of money to attain a position of power.
