No matter what your environment—small, large, distributed, superfast, multiprocessor—IEEE SOFTWARE gives you critical background.

No matter what your system—database, expert, modeling and simulation, data processing, robotics and manufacturing, computer-aided design, software engineering—IEEE SOFTWARE gives you input you shouldn’t overlook.

IEEE SOFTWARE looks at the entire range of software issues, yet provides advanced, focused articles on specific subjects. Written by practicing professionals for practicing professionals, IEEE SOFTWARE has become one of the field’s most turned to and cited sources.

Languages, programming environments, operating systems, specification systems, data engineering, database software, algorithms, design methodologies, reliability, security, performance measurement: IEEE SOFTWARE looks at them all.

Know your professional environment. Read IEEE SOFTWARE.
