FEATURE ARTICLES

10 Screen-Area Coherence for Interactive Scanline Display Algorithms
Gary A. Crocker
This article shows the feasibility and demonstrates the utility of incrementally updating portions of an image that correspond to model modifications.

18 Stereo Animation for Very Large Data Bases: Case Study—Meteorology
Thomas V. Papathomas, James A. Schiavone and Bela Julesz
The particle system format has been used with stereo animation for visualizing meteorological data obtained from a weather simulation program.

Selections from CHI and GI 87
28 Guest Editors' Introduction
Peter P. Tanner and John M. Carroll

34 On the Parameters of Human Visual Performance: An Investigation of the Benefits of Antialiasing
K.S. Booth, M.P. Bryden, W.B. Cowan, M.F. Morgan, and B.L. Plante
There's more to graphics than pretty pictures. An experiment was performed to determine how much realism is needed for tasks similar to those encountered in actual systems.

42 Experiences with the Alternate Reality Kit: An Example of the Tension Between Literalism and Magic
Randall B. Smith
An animated environment for creating interactive simulations is explored in terms of features that are true to a known metaphor versus those that violate the metaphor.

51 Creating Interaction Techniques by Demonstration
Brad A. Myers
Peridot, an experimental user interface management system, allows nonprogrammers to create user interfaces through a variety of demonstrational methods.
