Introducing Design. 
The first thinking tool for both sides of your brain.

Now there's a powerful graphics and text handling program to help you visualize complex systems. Design lets you create understandable graphic representations of projects and processes on your Macintosh™ or IBM® PC. So you can organize quickly, analyze effectively, and communicate clearly.

Draw flow charts, organizational charts, computer programs, communication networks, presentation graphics and production line processes—all in record time. Design supports desktop engineering, CASE, CIM, business planning, network planning, and other applications.

Design makes it easy to establish, maintain and understand logical relationships. Once you connect one object to another in a diagram, it stays connected, no matter where you move it.

Build Design diagrams up to 9,999 pages. And arrange them in hierarchical structure. You can also develop successively detailed descriptions within one multi-level diagram. Or hide detail, so the big picture is easier to see. Even edit, manipulate and style text inside any graphic object. And create "hypertext" links to organize text across multiple pages.

And now there's Design/IDEF,™ our automated diagramming tool for the Macintosh. With an interactive data dictionary, a data capture facility, master page templates, and text handling facilities. Or to develop your own customized applications, there's Design/QA, the open architecture version of Design.

That's the verbal description of what Design can do. For a more graphic illustration, look to your right.

Why just draw graphics, when you can draw conclusions?

For more information about Design, or for the name of the dealer nearest you, mail this coupon to Meta Software Corporation, 150 CambridgePark Drive, Cambridge, Mass., 02140. If you can't afford to wait, call us at 800-227-4106. In Massachusetts, call 617-576-6920.
