We haven't yet found a limit to the variety of printed circuitry we can make.

For example, everything from conventional single- and double-sided boards through exotic multi-layer circuitry (up to 23 layers).

Also, there's no limit to our design and production capabilities...from artwork to the complete, delivered circuit boards.

Nor is there any limit to ACD's ability to react to your requirements, with our close technical liaison.

Explore the dimensions of ACD's capabilities. Then tell us your limits.

See if you can find our limits.
