OUR TRIDENTS ARE SO WELL MADE THEY'LL COME APART IN 10 MINUTES.

We've made it very easy for you to get to all the parts and components of every Trident disk drive.

You can remove all subassemblies without using a soldering iron. They all either slide right out, or fold out on hinges.

You can connect an exerciser to troubleshoot without removing any system cables.

The degate switch on every Trident lets you take out one drive for repairs without interrupting the others.

And since all critical subassemblies are enclosed to prevent contamination, they stay clean when the skins are off.

MAINTENANCE

All this means that when you need to maintain a Trident, you don't have to pamper it.

You can take it apart fast. Get the work done simply.

And get it back together fast.

But design excellence is only part of the Trident story. Capacities range from 27 to 312 megabytes, and each Trident model is fully compatible with every other Trident model.

Each gives you track-following servo technology—plus one of the lowest cost-per-byte ratios in the industry.

TRIDENT FORMATTER

Our 1150A Formatter is also easy to maintain. It offers micro/minicomputer systems designers important features previously available only in large disk controller subsystems. Features like ECC, RPS, and overlapped seek.

It can control and format any mix of up to eight Trident drives—for a total storage capacity of up to 2.4 billion bytes online. And it can be attached to virtually any micro/minicomputer.

STATE OF THE ART

If features like these are important to your growing systems business, you'll want more data on the state-of-the-art Trident family. Just call us at (714) 821-2011, or fill out the coupon. We'll do the rest.
