Computers are fun. And affordable. Thousands of people are already using personal computers for TV games, video color graphics, digital music and lots of things nobody ever dreamed of—till now.

Until we came along the toughest part about getting started with computers was shopping for one. Now you can visit a ByteShop and put your hands on a wide variety of personal, hobby and business computers. Browse through our library of helpful literature. Ask a few questions. Or sign up for one of our starter classes. We'll take the time to advise you on how to get started—or even if you should get started at all.

Computers don't make the least expensive hobby in the world—just one of the most satisfying. You can get started for $35—the cost of our starter class. If you're ready to start building your own computer from a kit, that will cost you about $250. Or, we'll sell you an assembled computer for $695.

To get you going quickly, we'll let you buy now and wait 90 days before your first payment.
