The Latest in Data Processing

MANAGING SOFTWARE PROJECTS
J.K. Buckle, International Computers Limited
Describes the general areas which any software project manager must consider, problems likely to occur and suggested techniques for solving them.
1977, 125 pp., $13.95, 0-444-19457-6

NUMERICAL ANALYSIS FOR COMPUTER SCIENCE
Irving A. Dodes, CUNY
The first serious exploration of the mathematical background of computer programming.
1977, 640 pp., $18.95, 0-444-00238-3

FUZZY AUTOMATA AND DECISION PROCESSES
Madan M. Gupta, University of Saskatchewan, George N. Saridis, Purdue University and Brian R. Gaines, University of Essex, England (Editors)
An up-to-date account of the recent developments both in the theory and application of fuzzy sets, by leading international authorities.
1977, 336 pp., $37.50, 0-444-00231-6

A COMPARATIVE STUDY OF PROGRAMMING LANGUAGES
Sec. Rev. and Enlarged Ed. 1977
Bryan Higman, University of Lancaster
Covers recent developments such as two-level grammars, the Parsing Machine and the application of Markov algorithms.
1977, 240 pp., $16.95, 0-444-19495-9

AUTOMATA
David Hopkin and Barbara Moss, University of Salford, England
Covers finite automata, intermediate automata, turing machines and computable functions and computability.
Jan.1978, 166 pp., $15.95, 0-444-00249-9

AN INTRODUCTION TO THE GENERAL THEORY OF ALGORITHMS
Michael Machtay and Paul Young, Purdue University
A thorough introduction to basic recursion theory, including the equivalence of various models of computation, standard examples of unsolvability results and proof of the Godel Incompleteness Theorem.
Jan. 1978, 272 pp., $19.95 cloth 0-444-00226-X
$9.95 paper 0-444-00227-8

STUDIES IN AUTOMATIC PROGRAMMING LOGIC
Zohar Manna, Sanford University, Richard Waldinger, Sanford Research Institute, with contributions by Shmuel Katz, IBM Scientific Center, Israel, and Karl Levitt, Sanford Research Institute
This collection of papers illustrates how intelligent systems can be applied to the verification, debugging and synthesis of computer programs.
1977, 256 pp., $15.95 cloth 0-444-00224-3
$8.95 paper 0-444-00225-1

INTERPRETING MACHINES
Elliott I. Organick, University of Utah and James A. Hinds, Burroughs Corp.
Describes the architecture of the Burroughs 1700/1800 family, particularly the B1726 computer system: its internal structure, and how it may be programmed for the emulation of other computer systems.
In prep. Feb. 1978, 320 pp., 0-444-00241-3

INFORMATION RETRIEVAL AND THE COMPUTER
C.D. Paice, University of Lancaster
Outlines the actual and possible uses of computers for storing and retrieving information, discussing the main methods and problems involved in practical and experimental systems.
1977, 217 pp., $16.95, 0-444-19494-0

AN INTRODUCTION TO ELEMENTARY COMPUTER AND COMPILER DESIGN
Dennis R. Steele, Graceland College
Provides a strong introductory overview to both the hardware design and high-level language software design for a simple digital computer.
March 1978, 208 pp., $14.95, 0-444-00243-X

ERROR-DETECTING CODES, SELF-CHECKING CIRCUITS AND APPLICATIONS
John F. Wakerly, Stanford University
A comprehensive treatment of error-detecting codes with a detailed study of methods used to detect hardware failures in self-checking computers.
March 1978, 224 pp., $17.95 cloth 0-444-00256-1
$8.95 paper 0-444-00259-6

See these and other recent titles at our booth at the 1978 ACM Computer Science Conference.
