FEATURE ARTICLES

6 Software Configuration Management: A Tutorial
   Edward H. Bersoff, Vilas D. Henderson, and Stan G. Siegel
Developers and buyers can avoid disappointments and cost overruns by carefully tracking software system configurations through the system life cycle.

16 Charge-Coupled Device Memories: A Perspective
   D. P. Bhandarkar, J. B. Barton, and A. F. Tasch, Jr.
CCD memories can fill the gap between RAMs and disks. If cost-effective, they will tend to be used in high-end, high-performance computers.

27 Coherent Optical Computing
   David Casasent
Optical computing has a great many applications in data processing, owing in part to the high speed and parallelism inherent in optical devices.

42 Exploiting Program Concurrency in Computing Systems
   Philip C. Treleaven
The solution of many large computational problems is an inherently concurrent process. But most existing computing systems are inherently sequential. This mismatch may be overcome by data-flow computing.

54 Microcomputer-Aided Eating for the Severely Handicapped
   R. L. Ramey, J. H. Aylor, and R. D. Williams
A prototype system shows how small, intelligent devices may offer the handicapped a new degree of independence.

SPECIAL FEATURES

62 COMPSAC 78 Wrap-Up
   Ware Myers
The Second Annual Computer Software and Applications Conference, held November 13-16 in Chicago, drew 715 attendees to consider aspects of software design, quality assurance, and project management.

72 Open Channel: A User-Driven Approach to Better User Manuals
   John Maynard
A manager’s experience shows that we can improve programming manuals if we employ a different kind of writer and a different approach to manual organization.
