Expect the unexpected when you attend this seminar on THE INCREDIBLE ADVANCES IN DATABASE TECHNOLOGY

The founder of modern database systems, Charlie Bachman, in a three-day seminar

Send today for full seminar information.

Understand the issues and concepts of modern database technology. The leading theoretician in the field leads you through the potentials and pitfalls.

Let Charlie Bachman introduce you to the work station model of application systems. Then follow as he explains the data storage and retrieval concepts and interprocess communication concepts that a computer-based information system can support.

Charlie Bachman is the founder of modern database systems

Technology Transfer Institute is proud to offer you this important professional educational opportunity. Charlie Bachman is a senior research scientist with Honeywell Information Systems and author of many papers on database management and systems architecture. He holds many U.S. and foreign patents on database and computer concepts. A frequent speaker at U.S. and international computer meetings, Mr. Bachman is a Distinguished Fellow of the British Computer Society and has received the ACM’s highest technical honor, the Turing Award.

December 3–5, 1980  Los Angeles
