Complete systems for computer graphics and image processing.

And, we do mean complete! Grinnell systems can include computers, disc drives, terminals and software operating systems. Plus a FORTRAN software and driver package; high resolution TV monitor, camera, and hard copy color printer.

There are also other options to meet any special requirement you might have.

Of course, you may already have some of the necessary hardware.

That's why Grinnell systems work with standard TV monitors and cameras, and why plug-compatible interfaces are available for most minicomputers.

We also give you a complete product line to choose from:

**GMR 270 Series**: 512 x 512 resolution frame buffers and full color pipeline image processing systems.

**GMR 260 Series**: 1024 x 1024 resolution frame buffers for grey scale, black and white, pseudo color and full color.

**GMR 27 Series**: High speed, modular graphic and image display systems.

**GMR 37 Series**: Low cost graphic display systems.

So, whether you want to analyze images from outer space or monitor a process in a plant, Grinnell has a complete system that can do it. For complete specifications and/or a quotation, call or write today.
