With Optronics image processing systems. They digitize, manipulate, enhance, and reconstruct imagery.

Optronics image processing systems range from 10" x 10" to 40" x 40" formats, black and white or color. They operate in standalone mode or on-line with a minicomputer.

Discover the secrets of remote sensing, reconnaissance, graphic arts, oil, gas, and mineral exploration, cartography, cell genetics, medical and industrial radiography, p.c. board artwork generation, non-destructive testing, and quality control.

Unlike CRT devices, Optronics systems offer high accuracy and color fidelity over the full dynamic range.

Discover the secrets of the universe with Optronics digital scanners, film plotters, scanner/plotters, and laser devices.
