9 Real-Time Graphics in Command/Control Situation Displays
Marvin Fry
The real-time situation display represents a distinctly more complicated system than that required to solve the typical off-line graphics problem.

19 Software Communication Mechanisms: Procedure Calls Versus Messages
John A. Stankovic
If both procedure calls and messages are available, how does a user perceive their differences and similarities?

27 The Amdahl 470V/8 and the IBM 3033: A Comparison of Processor Designs
Robert W. Doran
These implementations of the System 370 functional architecture both achieve high performance, yet their technologies, principles, and design philosophies are quite different.

41 Testing and Fault Tolerance of Multistage Interconnection Networks
Dharma P. Agrawal
Test length is independent of network size in this simple, straightforward methodology for testing MINs. It requires only four test sequences for single-fault diagnosis.

55 A Unix-Based Local Computer Network with Load Balancing
Kai Hwang, William J. Craft, George H. Goble, Benjamin W. Wah, Faye A. Briggs, William R. Simmons, and Clarence L. Coates
Applying high-level application programs to a local computer network is a good method of balancing the workload among its host processors.
