Why I recommend Logitech's Modula-2

Logitech Modula-2™ combines many of the best features of both C and Pascal. My product Time Line™ contains over a million bytes of source code. It is fast and indisputably powerful. I estimate that it would have taken 20 to 50 percent more time to develop in C, and would not be as reliable. I anticipate half the maintenance costs using Logitech Modula-2. Six years ago I was recommending C for serious programming. Today, I recommend Logitech Modula-2.

Further comments:

Access to the machine: Logitech Modula-2 gives you direct access to the hardware.

Speed: Logitech Modula-2 compiles native machine code.

Strong Typing: Catches many programming errors that would slip past a C compiler.

Modularity: It is very easy to insulate one part of a program from changes in another.

Debugging: Logitech provides you with a runtime and a post-mortem debugger. Both are symbolic, and show source code, call chains, variables, modules, and raw memory.

Overlays: Your main program can bring overlays into memory. You don't even have to decide in advance which overlays or their order.

Version Control: The compiler, linker and loader are compatible with version of modules. Programs that contain overlays are consistent.

Good Library: Includes modules for file I/O, string handling, real number math, operating system access, screen and keyboard, and you can substitute your own.
