This conference encompasses the technical aspects of specifying, designing, implementing, and evaluating distributed computing systems. In such systems, there are multiple processing resources interconnected to operate under system-wide control with minimal reliance on centralized procedures, data, or hardware. The location of computing resources may span the spectrum from physical adjacency to geographical dispersion. The topics of interest include the following aspects of distributed computing systems:

- Decentralized and Parallel Computer Architectures
- Communication Architectures and Protocols
- Distributed Operating Systems
- Applications
- Distributed Database Systems
- Languages, Tools, and Software Engineering
- Reliability and Fault Tolerance
- Modeling and Performance Evaluation

INFORMATION FOR AUTHORS

Authors are requested to submit five copies (in English) of their double-space typed manuscript (maximum of 20 pages) with an abstract to the Program Chairman by November 1, 1987. The conference language is English and final papers are restricted to eight IEEE model pages. A submission letter that indicates which of the conference areas is most relevant to your paper must accompany the paper. In case of multiple authors, an indication of which author is responsible for correspondence and preparing the camera-ready paper should be included. Authors will be notified of acceptance by February 1, 1988 and will be given instructions for final preparation of their papers at that time. Outstanding papers will be eligible for publication in Computer Society/IEEE journals.

TUTORIALS

In addition to papers, proposals for one day tutorials are solicited in any of the conference areas. Such proposals should be submitted to the Tutorial Chairman by October 1, 1988.
