

CALLS FOR IEEE CS PUBLICATIONS

As semantic technologies prove their value with targeted applications, opportunities increase for considering their application as business enablers. *IEEE Internet Computing* magazine is seeking articles for a September/October 2007 special issue on recent research that uses semantics to improve on traditional knowledge-management approaches or to realize emerging knowledge services' requirements.

Possible topics include the use of semantics in knowledge services and service science, semantic metadata, business modeling and processes as mediated by semantic technology, and semantic technology in the framework of organizational learning and behavior.

Submissions are due by **15 January 2007**. For author instructions and a complete call for papers, visit www.computer.org/internet.
