CONTENTS

COVER FEATURES

22 Thinking Virtual
Oliver Bimber
Recent virtual reality advances provide strong support for psychobiological therapies and improved communications.

24 Transcending the Self in Immersive Virtual Reality
Mel Slater and Maria V. Sanchez-Vives
Multisensory body illusions work well in immersive virtual reality, and recent findings suggest that they offer both a powerful tool for neuroscience and a new path for future exploration.

31 Virtual Reality Exposure Therapy for Combat-Related Posttraumatic Stress Disorder
Albert Rizzo, Arno Hartholt, Mario Grimani, Andrew Leeds, and Matt Liewer
A team of behavioral scientists, software engineers, and virtual artists has created Bravemind, a flexible virtual reality system that offers significantly enhanced prolonged exposure treatment for posttraumatic stress disorder.

38 Reverse Engineering Animal Vision with Virtual Reality and Genetics
John R. Stowers, Anton Fuhrmann, Maximilian Hofbauer, Martin Streinzer, Axel Schmid, Michael H. Dickinson, and Andrew D. Straw
Virtual reality systems, combined with advances such as new molecular genetic tools and brain-recording technologies, reveal how neuronal circuits process and act on visual information.

46 Immersive 3D Telepresence
Henry Fuchs, Andrei State, and Jean-Charles Bazin
3D telepresence research provides insight into the technology’s potential, as well as into its remaining challenges.

COMPUTING PRACTICES

53 Shortening the Boot Time of Android OS
Xia Yang, Nan Sang, and Jim Alves-Foss
A variation of the suspend-resume technique eliminates the need to initialize the Linux kernel, and when combined with approaches to enhance external memory read speed and shrink the suspend image, can decrease Android OS boot time by up to 90 percent.

RESEARCH FEATURES

59 Measuring Variance between Smartphone Energy Consumption and Battery Life
Minyong Kim, Young Geun Kim, Sung Woo Chung, and Cheol Hong Kim
A case study reveals why energy savings plans must be based on battery consumption, not energy used.

66 Monitoring Translation Lookahead Buffers to Detect Code Injection Attacks
Youngjung Ahn, Yong suk Lee, Jin-Young Choi, Gyungho Lee, and Dongkyun Ahn
By identifying memory pages that external I/O operations have modified, a proposed scheme blocks malicious injected code activation, accurately distinguishing an attack from legitimate code injection with negligible performance impact and no changes to the user application.

ABOUT THIS ISSUE

Advances in virtual reality technology are now yielding novel therapies and approaches to challenges that are psychobiological in nature. The four cover features explore immersive virtual environments, VR-based PTSD therapies, VR tools to understand animal vision, and the latest advances in 3D telepresence.
COLUMNS

7 Computing Conversations
Andrew S. Tanenbaum: The Impact of MINIX
Charles Severance

9 Computing and the Law
Supreme Court IP Update
Brian M. Gaff

13 32 & 16 Years Ago
Computer, July 1982 and 1998
Neville Holmes

73 Science Fiction Prototyping
Talking to the Future
Brian David Johnson

76 Out of Band
Robert David Steele on OSINT
Hal Berghel

82 Green IT
Energy Efficiency through Significance-Based Computing
Dimitrios S. Nikolopoulos, Hans Vandelendocck, Nikolaos Bellas, Christos D. Antonopoulos, Spyros Lalas, Georgios Karakonstantis, Andreas Burg, and Uwe Naumann

86 Social Computing
Toward Connected Shared Experiences
Pablo Cesar, Rene Kaiser, and Marian F. Ursu

90 Security
Cloudebug: A Programmable Online Malware Testbed
Chi-Wei Wang, Chia-Wei Wang, Chu-An Hsieh, and Shiuhpyng Winston Shieh

93 Standards
802 LAN/MAN Standards: High Quality and Market Relevant
Paul Nikolich

108 The Errant Hashtag
The Half-Told Lie
David Alan Grier
