Lipsett received his BS and MS degrees from Brandeis University, and his PhD from MIT, in mathematics. He is a member of the ACM and the IEEE Computer Society. His address is Intermetrics, Incorporated, 4733 Bethesda Avenue, Bethesda, Md. 20814.

Moe Shahdad, the principal designer for the VHSIC hardware description language, is the technical director of CAD Language Systems, Inc., which he cofounded in January of 1986. He was previously the chief language designer for VHDL with Intermetrics, in which capacity he led the design of the language, coordinating provision of language requirements and validation of language design. Prior to that, he was director of information systems at Intermetrics. From 1974 to 1979, he was assistant professor of computer science at Tehran University of Technology's department of mathematics and computer science. Over the last 15 years, he has worked with hardware description languages, programming languages, compilers, and databases.

Shahdad received his BS in electrical engineering from the University of Tehran in 1967, his MS in mathematics and computer science from Queen's University of Belfast in 1971, and his PhD in computer science from the University of London in 1974. He is a member of the ACM and the IEEE Computer Society.

Shahdad and Marschner may be reached at CAD Language Systems, Inc., 11837 Enid Drive, Potomac, Md. 20854.

Roger Lipsett is the VHDL program manager for Intermetrics, for whom he has worked since 1978 as a compiler and language designer. Previously, he was employed by the large systems group of Digital Equipment Corporation, where he was responsible for APL and BASIC development on series PDP-10 and PDP-20 computers.

Erich Marschner, a major contributor to the design of the VHSIC hardware description language and its associated support environment, is a senior systems engineer with CAD Language Systems, Inc., which he cofounded in January of 1986. He was employed by Intermetrics from 1982 to 1985, and has been designing and implementing languages and language systems since 1980. His interests include languages, tools, and systems for automating hardware and software system design.

Marschner holds a BS in computer science and a BA in medieval languages and literature, both from the University of Maryland. He is a member of the ACM, the IEEE Computer Society, and the AAAI.

We don't design or test hardware, but we'll help you design and test your own hardware, and we'll help you communicate your ideas using VHDL.

- Are you maintaining multiple CAD systems for design, documentation, and testing?
- Do you have problems communicating design data to users and secondary sources?
- Do your system designers and component designers speak different languages?

If so, use VHDL: an industry-wide hardware description language.

CLSI CAD Language Systems, Inc.

We are now under contract to the US DoD to provide technical support to the IEEE for the standardization of VHDL. Join us in this effort.
