The International Conference on Computer Design: VLSI in Computers and Processors covers all aspects of the design and implementation of VLSI computer and processor systems. The multi-disciplinary nature of the conference is intended to emphasize the interactions among architecture, computer-aided design, design & test and VLSI technology.

Original papers are especially solicited in the following areas as they relate to computer and processor design:

- **VLSI & Technology**: State of the Art System Integration, Packaging, Wafer-Scale Integration, Environmental Factors, Optical Interconnects, VLSI: CMOS, Bipolar, GaAs, Low Temperature, Mixed Technologies, Storage: Optical, Magnetic, Semiconductor.

Papers are also solicited which describe innovative features of new products, and which describe the overall integration of Technology, Architecture, CAD, and Design and Test into the Computer Design Process.

**Instructions to Authors**

Prospective authors are invited to submit a 500-1000 word summary. To be considered for review, summaries must include the following information: (a) clear description of the contribution and why it is important, (b) for original research submissions state what is novel about the contribution, (c) for review and tutorial submissions state the contribution to the multi-disciplinary mission of the conference.

Submit six (6) copies of summaries, along with the author names, addresses, office and home telephone numbers, no later than February 1, 1988 to Technical Program Chair: Prof. Giovanni De Micheli

Center for Integrated Systems
Stanford University
Stanford, CA 94305
Telephone: (415) 725-3632

- Proposals for specially organized sessions are solicited. Please forward your proposals to the Technical Program Chair for review by no later than January 1, 1988.
- Awards will be presented to the best conference papers.
