Special Issue

6 Guest Editors' Introduction: Hardware Acceleration in Computational Biology
Partha Pratim Pande and Ananth Kalyanaraman

8 Hardware Accelerators in Computational Biology: Application, Potential, and Challenges
Turbo Majumder, Partha Pratim Pande, and Ananth Kalyanaraman

19 A Review of Hardware Acceleration for Computational Genomics
Srinivas Aluru and Nagakishore Jammula

31 USHAW2-GPU: Empowering Faster Gapped Short-Read Alignment Using GPU Computing
Yongchao Liu and Bertil Schmidt

40 Pursuing Coordinated Trajectory Progression and Efficient Resource Utilization of GPU-Enabled Molecular Dynamics Simulations
Samuel Schlachter, Stephen Herbein, Shuching Ou, Jeremy S. Logan, Sandeep Patel, and Michela Tauter

51 Large-Scale Pairwise Sequence Alignments on a Large-Scale GPU Cluster
Ibrahim Savran, Yang Gao, and Jason D. Bakos

62 Reconfiguring the Bioinformatics Computational Spectrum: Challenges and Opportunities of FPGA-Based Bioinformatics Acceleration Platforms

Other Features

75 Built-In EVM Measurement With Negligible Hardware Overhead
Ender Yilmaz, Afsaneh Nassery, and Sule Ozev

83 Automated Design Error Localization in RTL Designs
Maksim Jenihhin, Anton Tsepurov, Valentin Tlthonirow, Jaan Raik, Hanno Hantson, Raimund Ubear, Jorge Herman Meza Escobar, and Heinz-Dietrich Wuttke

93 Data Center Energy Efficiency: Improving Energy Efficiency in Data Centers Beyond Technology Scaling
Frederic T. Chong, Adel A. M. Saleh, Martijn J. R. Heck, Parthasarathy Ranganathan, and Hassan M. G. Wassel
