

## Helping the Field

In your timely editorial "Avoiding Another AI Winter" (Mar./Apr. 2008), you end with two items we can all do to help the field:

- acknowledge the successes we see and
- document the past decade's successes.

To those ends, the AAI Web site AI Topics ([www.aaai.org/aitopics](http://www.aaai.org/aitopics)) can help. On that site, Jon Glick's monthly compendia of news articles about successful applications of AI as well as items about issues in the news, appear as "AI in the News." These items have been archived since 2001.

Articles and videos relevant to AI are included in the searchable pages. So, a search on "money," for example, will show the March 2008 page, which includes the story on the

technology behind the FBI's search for money laundering that pointed to the NY governor's large cash withdrawals.

AAAI members can sign up for monthly "AI Alerts," which deliver a selection of current news stories mentioning AI. Many stories are about positive successes. Even the stories containing criticisms or descriptions of failures are items that we should be aware of because colleagues, friends, and students are reading these stories. Knowing what our critics are reading can also help us celebrate our many successes. ■

### Correction

In Figure 5a of "The Smart Architect: Scalable Ontology-Based Modeling of Ancient Chinese Architectures" (Jan./Feb. 2008, p. 54), the label for the left deep-gray grid set should be  $P_C$ , and the label for the right deep-gray grid set should be  $\bar{P}_C$ . We apologize for the error. We've updated the electronic version of the article in the IEEE Computer Society's Digital Library.

## The MIT Press

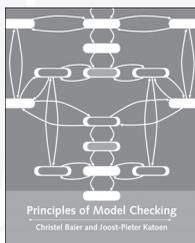

### A Semantic Web Primer

Second Edition

Grigoris Antoniou and Frank van Harmelen

"This book is essential reading for anyone who wishes to learn about the Semantic Web. By gathering the fundamental topics into a single volume, it spares the novice from having to read a dozen dense technical specifications. I have used the first edition in my Semantic Web course with much success." — Jeff Heflin, Associate Professor, Department of Computer Science and Engineering, Lehigh University  
Cooperative Information Systems series • 288 pp., 38 illus., \$42 cloth

### Principles of Model Checking

Christel Baier and Joost-Pieter Katoen

foreword by Kim Guldstrand Larsen

"This book offers one of the most comprehensive introductions to logic model checking techniques available today. The authors have found a way to explain both basic concepts and foundational theory thoroughly and in crystal clear prose. Highly recommended for anyone who wants to learn about this important new field, or brush up on their knowledge of the current state of the art." — Gerard J. Holzmann, NASA/JPL Laboratory for Reliable Software  
936 pp., 319 illus., \$60 cloth

### Elements of Argumentation

Philippe Besnard and Anthony Hunter

"A landmark volume in the study of argumentation. For those of us who work in artificial intelligence, this will be the standard reference for years to come." — Simon Parsons, Department of Computer and Information Science, Brooklyn College, City University of New York  
320 pp., 12 illus., \$35 cloth

NOW IN PAPER

### Document Engineering

Analyzing and Designing Documents for Business Informatics and Web Services

Robert J. Glushko and Tim McGrath

"This manifesto for the document engineering revolution gives you the what, the why, and the how of automating your business processes with XML, leading to greater cost savings, higher quality, and more flexibility." — Hal Varian, Haas School of Business and Department of Economics, University of California, Berkeley  
278 pp., \$22 paper
