This special issue presents recent results on Web and social graph mining, both at the methodological level and on the application side. The goal is to allow researchers to share their experience in this new and multifaceted field, and to help industry in its efforts to provide users with new social networking applications.

WEB AND SOCIAL GRAPH MINING

9 Guest Editors’ Introduction
Paolo Boldi, Stefano Leonardi, Cecilia Mascolo, and Michalis Vazirgiannis

11 Anti-Reconnaissance Tools: Detecting Targeted Socialbots
Abigail Paradise, Rami Puzis, and Asaf Shabtai

20 Dynamic Latent Expertise Mining in Social Networks
Nir Ofek and Asaf Shabtai

28 Recommending Venues Using Continuous Predictive Social Media Analytics
Marco Balduini, Alessandro Bozzon, Emanuele Della Valle, Yi Huang, and Geert-Jan Houben

36 Predicting Edge Signs in Social Networks Using Frequent Subgraph Discovery
Athanasios Papaioikonomou, Magdalini Kardara, Konstantinos Tserpes, and Theodora A. Varvarigou

FEATURE

44 Contrail: Decentralized and Privacy-Preserving Social Networks on Smartphones
Patrick Stuedi, Iqbal Mohomed, Mahesh Balakrishnan, Z. Morley Mao, Venugopalan Ramasubramanian, Doug Terry, and Ted Wobber
