COME WORK ON YOUR VISION OF THE FUTURE.

The Aerospace Corporation is looking for one outstanding individual to take charge of our new Electronics Department — someone who can give it a shape and direction for the future.

As Director of Microelectronics, your primary responsibility will be to formulate and manage a wide spectrum of advanced programs with military space applications. This new position offers an excellent salary and benefits package, including 3 weeks paid vacation the first year.

You'll guide the efforts of 25 talented technicians — professionals of the highest calibre, with the eagerness and freedom to think in original ways about some of the most pressing engineering problems of our time.

You should have an MS EE degree or the equivalent, familiarity with spacecraft system and electronic circuit design, and at least ten years experience in the solid state electronics field. A thorough working knowledge of CAD approaches, utilizing such software as SPICE, SA-LOGS, SCOAPS and LOGSIM, is also required. A working familiarity with the design and fabricating techniques of PROMS, ROM and RAM for technologies such as NMOS and CMOS (Bulk and SOS) is desirable.

And you'll be part of the Aerospace Corporation — a non-profit company which serves as a unique technical resource in the public interest. And whose sole product is ideas — for now and for the future.

To be considered for this outstanding opportunity, please submit resume in confidence to:
