

of double buffering is required at the DAC input. A number of recently developed converters include such buffering, plus address decoding to route the high and low bytes of data to the correct latch circuitry. A block diagram of this type of DAC is shown in Figure 23.

Another feature offered in many DACs is an internal reference voltage. Since all converters require this voltage to set the full-scale voltage, DACs with their own internal references reduce part counts and simplify project implementations.

An overview of digital-to-analog converter characteristics has been presented along with a discussion of the implementation of popular D/A converters. Differences among the types of converters have been discussed in order to provide a better understanding of the many offerings in the DAC market. The next article in this series will discuss the characteristics of analog-to-digital converters. ■

Richard C. Jaeger has been an associate professor of electrical engineering at Auburn University, Alabama, since 1979. From 1969 to 1974, he was with the IBM General Systems Division, Boca Raton, Florida, where he worked on data acquisition technology and small computer architecture. In 1974, he became a research staff member at the IBM Thomas J. Watson Research Center, Yorktown Heights,

New York, where his interests included analog integrated circuits, I^2L , and low-temperature MOS device behavior. In 1976 he returned to IBM, Boca Raton, where he continued work on the behavior of MOS devices at low temperatures and on architectural alternatives for small computer systems.

Jaeger is the author of more than 40 technical papers and articles and is currently the editor-in-chief of *IEEE Micro*. He also serves on the program committee of the International Solid State Circuits Conference. A senior member of the IEEE, Jaeger holds the BS, ME, and PhD degrees in electrical engineering from the University of Florida, Gainesville.

Jaeger's address is Department of Electrical Engineering, 207 Dunstan Hall, Auburn University, AL 36849.
