“SHE” may be little, but “SHE” packs a wallop.
From $4.95 each.

Now you can get a high voltage rectifier that handles four times the current in half the size for less than half the cost.

SSDI introduces our new “SHE” and “SHG” family of high current, high voltage, miniature silicon rectifiers. The only rectifiers that offer all of these advantages in one product. Voltage up to 10KV and current up to 1AMP.

Not the kind to let you down, “SHE” is highly reliable. “SHE” functions admirably well in commercial, military, and industrial applications.

“SHE”s a team player, too. Her units can be placed in a series for higher voltage requirements like bridge rectifiers and special assemblies.

You won’t need external compensation networks either. Her junctions are metallurgically bonded to give you matched junction characteristics and low stray capacitance.

Available in standard and fast recovery. “SHE” series priced from $4.98 each, “SHG” series from $1.98.

Who said you couldn’t get a bigger charge from a smaller package?
