more instructions in a given amount of time. We expect that further simulation will verify if this is always true or if it is only a function of the instructions executed.

Our work suggests that

- further simulation and evaluation of non-synchronous multiprocessor systems should be carried out,
- multiprocessor systems in which the processors run at different speeds should be investigated,
- the simulation and evaluation of multiprocessor systems in which one processor is interrupt-driven and does not access the system bus continuously should be considered, and
- evaluation with actual programs should be performed.

Brian E. Corrigan III is a specialist engineer at the Boeing Military Airplane Company, Wichita, Kansas, where he has been involved in military avionics design and support equipment design since 1980. His interests include computer architecture, multiprocessor systems, microprocessor applications, MIL-STD-1553 hardware, and digital signal processing. A member of Tau Beta Pi and Eta Kappa Nu, he received the BS and MS degrees in electrical engineering from Wichita State University in 1980 and 1985, respectively.

Everett L. Johnson is an associate processor of electrical engineering at Wichita State University. Prior to joining the WSU faculty in 1971, he was employed by the Boeing Military Airplane Company in Wichita, Kansas, and by the Sandia Corporation in Albuquerque, New Mexico. His research interests include microprocessor applications, parallel processing, and the application of computers to aid the handicapped.

A senior member of the IEEE and a member of the IEEE Computer Society, Johnson has served as chairman of the IEEE Wichita Section and as chairman of the Wichita Sections of the IEEE Computer and Control Societies. He was cofounder of the IEEE Computer Society's Technical Committee on Computing and the Handicapped and served as its 1983-84 chairman. He has been a guest editor of IEEE Micro.

Johnson received the BSEE from the University of Kansas in 1962, the MSEE from the University of New Mexico in 1964, and the PhDEE from the University of Kansas in 1969.
