Systems Software Engineers

THE GOAL AHEAD IS CLEAR

At Honeywell we think a job should be interesting, challenging, exciting and goal directed. But we also think it should be fun, allowing you the opportunity to be yourself. We have a clear idea of where we're going and we want people with audacious concepts to help us design and develop the office automation products and systems of the future. To achieve that goal, we believe in adjusting to new people as they come through the door, not by forcing them into a pre-existing image of what we would like them to be.

Our Office Systems Development Group of technical professionals, scheduled to double in size in the year ahead, is meeting the productivity needs of the modern office worker in areas including:

**ELECTRONIC MAIL**
- Text Processing
- Document Management
- Decision Processing
- Remote Document Archiving
- Workstations
- Local Area Networks

Building on an existing product platform and integrating a variety of min and micro-computer systems together with large mainframes, we're perfecting the total systems concept. We're accomplishing this with advanced networking and data base management systems using both Honeywell and commodity software. And we have a renewed commitment to work with our customers using their input to drive our designs and development.

At Honeywell you're part of a $5.5 billion corporation with more high-technology capability than any other Fortune 500 company. Honeywell's business is high-technology. Our Information Systems organization includes 16,000 men and women dedicated to advancing the state-of-the-art. And from our CEO to first line management we are committed to providing each employee with the opportunity and encouragement to fulfill their individual goals.

Opportunities are immediately available for men and women with an appropriate technical degree and experience at all levels in the following areas of software systems design, development, and qualification using Pascal, ADA and Assembler Language.

**OFFICE SYSTEMS**
- Local Area Networks
- Network Servers
- Integration of PCs into Total Systems
- Document Management
- MS-DOS
- Graphics

**FUNCTIONAL TEST DEVELOPMENT**

Combine your software expertise and hardware knowledge to develop diagnostics for a new product line which consists of an 8088-based system, a local area network and various peripheral devices. You will have responsibility for writing the software necessary for testing the hardware of this new product line. 2-4 years of microprocessor and communications experience and a BS is desirable. Assembler level programming under standard operating systems, plus knowledge of MS-DOS, MPM-86 and IBM PC.

**SOFTWARE QUALIFICATION**

In this position, you will develop new approaches for testing software, utilizing automated scenarios. A BSCS or equivalent degree and software test background with programming experience is required. User-knowledge of communications and UNIX™ helpful.

**SYSTEMS ENGINEERING**

We are also looking for people to establish engineering product specifications, ensure compliance with National Standards, assess feasibility, estimate costs, do performance analysis and develop software tools. Experience in this area required with some knowledge of hardware design helpful. You must be sensitive to "User-Friendliness" issues.

The benefits of being a Honeywell employee go beyond the opportunities for personal growth and individual fulfillment. They include a variety of medical and life insurance plans, retirement benefits and a stock option plan. Come to where your vision will be appreciated, send your resume in confidence to Hugh Magbie, 804, S 184, Honeywell Inc., Office Management Systems Division, 300 Concord Road, Billerica, MA 01821.

Together, we can find the answers.
