Spinning through software changes and new versions?

Softool's Change and Configuration Control (CCC™) opens the door.

CCC is a software product that automates:
- management of changes
- management of different configurations
- control over who can make what type of changes and where

There is more. CCC is a stand-alone component of SOFTOOL®. An Integrated Programming Environment is also available.

Our credentials. Over 1000 SOFTOOL products are installed worldwide. A growing number of computer manufacturers offer SOFTOOL as part of their product line. These include: Digital Equipment Corporation, Gould S.E.L., Hewlett-Packard and Honeywell.

Available now. SOFTOOL is supported on the DEC VAX, DG MV, Gould S.E.L. 32 series, Honeywell 6000 (Level 66 and DPS B), HP 9000, and IBM 370, 30XX and 43XX computers.

Call Softool Corporation for more details or to arrange a hands-on demonstration.

CCC can handle anything. It can manage: source code, object code, test data, documents, ... and it can deal with programs in any language: Fortran, Cobol, Pascal, C, Ada*, Jovial, Assembly, ...

CCC provides every feature you need. It supports automatic reconstruction of previous versions, problem tracking, difference reports, management reports, access control, archiving, compression, encryption, automatic recovery, ...

CCC is easy to use. It is interactive and friendly. You need only learn a small set of commands. Help is available on-line. Interactive tutorials are included for both management and programmers. The user interface is the same for all computers supported.
