

Creating Software Solutions for Numerically Intensive Applications

Programming today's sophisticated special purpose processors, such as the array processor, calls for a level of skill and experience not generally available within most organizations. This shortage of specialists has created a software 'capability gap.'

Quantitative Technology Corporation (QTC) is here to help you bridge the gap. Our team of highly qualified and experienced software technicians can help get your application running on schedule, within budget, and at peak efficiency.

QTC provides software consulting and application or system programming, as well as software products, all designed to implement computationally intensive, high-speed computer applications. We are the recognized leader in array processor

programming for the scientific and engineering communities in both government and industry.

For a copy of our capabilities brochure or to arrange a no-obligation consultation, use the reader service card, write or call.

We'd like to help you meet your software challenge.
