Who We Are
The Software Engineering Institute is a newly created institute established by Carnegie-Mellon University under the sponsorship of the Department of Defense.

What We Do
The SEI will develop and evaluate software development technologies and accelerate the rate at which promising techniques and systems are moved into actual practice. We will deal with the problems of software development by creating software tools running on complementary hardware facilities to help automate various steps in the management, production, and maintenance of systems. These tools will include machine assisted standards enforcement, system verification, and project progress reporting. The SEI will maintain a showcase software development environment, which will integrate many of the SEI projects. In our initial projects, we will evaluate existing Ada® programming environments, study current software licensing practices and issues, develop specification tools, design an M.S. curriculum, and establish the showcase software development environment. The SEI will maintain an advanced technology facility for its scientists, engineers, and trainees.

Who We Need
Research Programmers
System Programmers
Maintenance Engineers
Hardware Technicians

with education and experience in
Programming Environments
Compiler Technology
Ada®
Software Tools
Unix® Operating Systems
Local Area Networks
Professional Workstations
Software Management Systems

How To Apply
Send resumes to:
Personnel Department
Software Engineering Institute
Carnegie-Mellon University
Pittsburgh, PA 15213
(412) 578-7700

Benefits We Offer
- Flexible working hours
- Stimulating work environment with opportunities for advancement
- Challenging projects
- University educational opportunities

Ada® is a registered trademark of the U.S. Government
Unix® is a trademark of AT&T Bell Laboratories.

CMU is an equal opportunity affirmative action employer
