Excelerator has established itself as the most comprehensive micro-based design environment for systems analysts and designers. Here's why—

1. Mouse-driven graphics allow analysts to communicate project specifications clearly to both end users and programmers. Well understood requirements reduce the need for costly design modifications later. Excelerator supports data flow diagrams, structure charts and diagrams, data model diagrams, and presentation graphics.

2. Analysts gain productivity from having all the information about the system in one place—the Excelerator Dictionary. As your system design changes, the dictionary is updated to reflect these changes. Reviewing and updating can be done quickly and efficiently.

3. Analytical tools for verifying your design allow the development of better systems. Analysts can validate their designs using "where used" and "cross-reference" reporting. Explosion reports describe the data and related processes in up to 10 levels of detail. And a powerful report writer lets you produce preformatted or custom reports directly from the dictionary.

4. Project team members can access a central data dictionary using Excelerator's data sharing facility. Import/export functions allow users to move data from one workstation to another quickly and easily, and audit attributes automatically track changes to every entry.

Find out how you can significantly increase productivity while cutting your development costs. For your free Excelerator Introductory Kit call 617 497-4473.

Reader Service Number 1

"Our systems analysts can produce higher quality systems in half of the time with Excelerator."
