BEYOND THE CALL

The quality of articles appearing in IEEE Software is highly dependent upon the careful, timely reviews of our manuscript referees. Every manuscript submitted is subjected to the critical eye of these dedicated volunteers. Typically, reviewers present us with short-answer responses and a one-page description of the article's strengths and weaknesses. On rare occasions, a reviewer takes extra time and demonstrates exceptional insight, adding immeasurably to the quality of the published article. It is for this level of dedication to IEEE Software that we are especially appreciative, as it adds much to the impact of our magazine and the strength of our profession.

The following reviewers demonstrated these exceptional standards during 1996. Thank you!
