**Preface**

**Conference Organizers**

**International Program Committee**

**Reviewers**

---

**Invited Talk**

Testing Times: On Model-Driven Test Generation for Non-deterministic Real-Time Systems

E. Brinksma

---

**Architecture, Circuits, and Communication**

Enhanced Interleaved Multithreaded Multiprocessors and Their Performance Analysis

W. M. Zuberek

Logic Synthesis for Asynchronous Circuits Based on Petri Net Unfoldings and Incremental SAT

V. Khomenko, M. Koutny, and A. Yakovlev

Property Checking Based on Hierarchical Integer Equations

B. Alizadeh and Z. Navabi
Buffered Asynchronous Communication Mechanisms .................................................................36
F. Xia, F. Hao, I. Clark, A. Yakovlev, and E. G. Chester

Synchronous Systems and Components

A Behavioral Type Inference System for Compositional System-on-Chip Design .................................47
J.-P. Talpin, D. Berner, S. Kumar Shukla, P. Le Guernic, A. Gamatié, and R. Gupta

Arrays and Contracts for the Specification and Analysis of Regular Systems .......................................57
F. Maraninchi and L. Morel

Concurrency in Synchronous Systems ......................................................................................................67
D. Potop-Butucaru, B. Caillaud, and A. Benveniste

Process Algebras and Petri Nets

Context-Based Process Algebras for Mobility .........................................................................................79
R. Devillers, H. Klaudel, and M. Koutny

Verification and Implementation of Delay-Insensitive Processes in Restrictive Environments ..................89
H. K. Kapoor, M. B. Josepsh, and D. P. Furey

A Semantics of Security Protocol Language (SPL) Using a Class of Composable High-Level Petri Nets ......99
R. Bouroulet, H. Klaudel, and E. Pelz

Invited Talk

Comparison of Methods for Supervisory Control and Submodule Construction ....................................111
G. v. Bochmann and B. Daou

Programming Languages and Translations

On the Practicality and Desirability of Highly-Concurrent, Mostly-Functional Programming .......................115
C. H. Hauser and D. B. Benson

Rialto to B: An Exercise in Formal Development of a Language for Multiple Models of Computation ..........125
D. Björklund and J. Lilius

Translating Erlang to µCRL .......................................................................................................................135
T. Arts, C. B. Earle, and J. J. Sánchez Penas
A Front-End Tool for Automated Abstraction and Modular Verification of Actor-Based Models

M. Sirjani, A. Shali, M. M. Jaghoori, H. Iravanchi, and A. Movaghar

Invited Talk

Synthesis of Supervisory Controls for Discrete Event Systems

J. G. Thistle

Verification I

Equivalence Verification of Timed Transition Models

M. Lawford and H. Zhang

Nested Emptiness Search for Generalized Büchi Automata

H. Tauriainen

New Orbit Algorithms for Data Symmetries

T. A. Junttila

Modular Analysis of Systems Composed of Semiautonomous Subsystems

C. Lakos and L. Petrucci

Verification II

BMC via Dynamic Atomicity Analysis

T. Jussila

Evaluating Symbolic Traversal Algorithms Applied to Asynchronous Concurrent Systems

M. Solé and E. Pastor

Guided Model Checking with a Bayesian Meta-heuristic

K. Seppi, M. Jones, and P. Lamborn
