# Table of Contents

Foreword ........................................................................................................ iii

Volume 1 of 2

Session MA-I: Special Distinguished Lecturer for the Asilomar Conference 1988
A New Breakthrough In Linear-System Theory:
Kharitonov's Results .......................................................... 1
   P.P. Vaidyanathan

Session MP-I: Current Issues in Adaptive Filtering
Chair: John Shynk
   University of California, Santa Barbara, CA
Cumulant-Based Adaptive Time Delay Estimation ......................... 15
   H.H. Chiang and C.L. Nikias
A Survey of Adaptive Equalization for Magnetic-Disk Storage Channels .... 20
   J. Cloffi, W. Abbott and K.D. Fisher
An Adaptive IIR Lattice Filtering Algorithm ................................ 25
   K.X. Miao and H. Fan
On the use of Filter Banks in Adaptive Filtering ............................. 30
   M.R. Petraglia and S.K. Mitra
A Weaker Sufficient Condition for the Unimodality of Error Surfaces
Associated with Exactly Matching Adaptive IIR Filters ................... 35
   M. Nayeri
An Ode Approach for Analyzing the Tracking Behavior of Adaptive
Algorithms .................................................................................. 39
   B.D. Rao and R. Peng
Adaptive Beamforming for Large Arrays ...................................... 44
   B. Friedlander
RLS Adaptive Filtering without a Desired Signal: QR Algorithms
and Architectures ....................................................................... 49
   P.S. Lewis

Session MP-2: Image Processing and Computed Imaging
Chair: Mike Portnoff
   Lawrence Livermore Laboratory, Livermore, CA
Traveltime Tomography and Nonlinear Constrained Optimization ....... 54
   J.G. Berryman
Image Reconstruction using the Bispectrum .................................. 58
   T. Lawrence, P. Fitch and D. Goodman
Distributions for Seismic Signal Representation ............................. 63
   D. Harris, T. Hauk, M. Goldner, M. Kurtzer
3-D Crack Reconstruction in Radiographic Images using Projections
Obtained from a Linear Sample Shift ........................................ 68
   R.M. Wallingford, J.P. Basart
3-D Perspective View of Sonar Images ........................................ 73
C.H. Lee and R.J. Myers

Estimation of Parameters of Point Objects in 2-D Sampled Images ............ 78
J.L. Jenkins, S.F. Rudin

Comparative Analysis of Two Adaptive Methods for Image Change Detection ... 87
A. Elfishawy, S. Kesler and A. Abutaleb

Session MP-3: Communications Applications
Chair: Edgar Satorius
Jet Propulsion Laboratory, Pasadena, CA

A Dynamic Performance Index for Packet Switched Networks .................. 92
J.W. LaPatra, M. Speck

A Limited Sensing Random Access Algorithm with Binary Success-Failure Feedback .............................................................. 97
M. Paterakis, S. Hall

Implementation Issues in MAP Joint Source/Channel Coding .................. 102
K. Sayood, J.D. Gibson and F. Liu

Adaptive Synchronous Amplitude Demodulation .................................. 107
F.F. Yassa, S.E. Noujaim

Timing Recovery for Blind Equalization ........................................... 112
N.K. Jablon, C.W. Farrow and S.N. Chou

Performance of the Radon Transform Method for Constellation Identification .. 119
S.L. Wood, J.R. Treichler

Trapping Burst Errors in Discrete-Time Signals .................................. 124
T.G. Marchall, Jr. and R.J. Kolczynski

Optimal Design of Pulse Shapes by Means of Constrained Criteria ............ 129
R.A. Nobakht, M.R. Civanlar and S.H. Ardalan

Session MP-4: Digital Filters
Chair: Wasfy Mikhael
West Virginia University, Morgantown, WV

Least Squared Error FIR Filter Design Using Spline Transition Functions ...... 134
C.S. Burrus

A New Digital Recursive FIR Filter Structure with Low Roundoff Noise and Low Limit Cycle Oscillations ........................................... 137
H. Padir and L.E. Franks

An Exact Programmable Switched-Capacitor Equalizer ......................... 142
A. Petraglia and S.K. Mitra

Polynomial Multiplication and Filter Design via Fourier Transforms .......... 146
R. Krukar and N. Ahmed

Sampling Rate Alteration in Circulator Wave Digital Filters .................... 148
H. Dawei, C. Lu, X. Tongzhou
Window Shaping in the Design of FIR Filters ........................................... 152
B. Tseng and H.E. Peterson

Efficient Implementation of Chirp Z-Transform using a Cordic Processor .......... 157
Y.H. Hu and S. Naganathan

Sensitivity Analysis of 3-D Recursive Digital Beam Filter Structures .................. 161
Q. Liu and L.T. Bruton

Session MP-5: Components for Optical Signal Processing
Chair: John Pellegrino
Harry Diamond Laboratory, Adelphi, MD

Optical Interconnects ........................................................................... 166
J.A. Neff

Spatial Light Modulators for Signal Processing Systems ......................... 170
J.N. Lee

Advances in Photodetector Arrays for Optical Processing ..................... 176
P.P. Suni, D.D. Wen and J.D. Swarthout

Session MP-6: Advanced Digital Signal Processing
Chair: Larry Marple
ARCO Power Technologies, Inc., Washington, DC

Arma Parameter Estimation using Continuation Methods ......................... 184
V.L. Stonick and S.T. Alexander

Applications of the Martin Marietta Single Module Advanced Systolic Array Processor ................................................................. 189
A. Haug and R. Graybill

SETI Signal Processing ........................................................................ 194
E. Satorius and R. Brady

The AST All-Digital Tuner Chip Set ...................................................... 199
J. Gray, J. Treichler and M. Larimore

New Results on Multiple Correlations ................................................. 204
G.B. Giannakis

Robust Spectral Estimation: Autocorrelation Based Minimum Free Energy Method ................................................................. 209
S.D. Silverstein and J.M. Pimbley

Instantaneous Power Spectrum .......................................................... 214
R.D. Hippenste and P.M. Oliveira

Session MP-7: Intelligent Control Systems
Chairs: Gene Hostetter
University of California, Irvine, CA
Allen Stubberud
National Science Foundation, Washington DC.

An Overview of Design Methods for Sensor and Actuator Error Identification and Adaptive State Estimation .................................................. 219
P. D’Carpio-Montalvo and G. Hostetter
Minimal-Order Feedback Control Design ................................................. 223
   M.S. Santina and G.H. Hostetter

Deadbeat Feedback Design for Time Varying Systems ............................ 227
   J.J. Duffy

L. Theory Based Computer Aided Controller Synthesis for
   Time-Delay Systems ........................................................................ 232
   N.E. Wu

Set-Valued Filtering and Smoothing ..................................................... 236
   D. Morrel and W. Stirling

Pole Assignment in Linear Time-Varying Systems using State Feedback ...... 241
   M. Alfhaid and G.K.F. Lee

Session TA1: Applications of Adaptive Processing
Chair: Neil Jablon
   AT&T, Middletown, NJ

The Role of Adaptive Beamforming and Modern Spectral Estimation
   in High Resolution Microwave Imaging ............................................ 246
   B.D. Steinberg and C. Jin

Convergence Properties of a Constrained 2-D Adaptive Digital Filter ........ 250
   W. K. Jenkins, J.C. Strait and R.P. Faust

Joint Spatial and Temporal Equalization in a Decision-Directed Adaptive
   Antenna System ............................................................................ 255
   R.P. Gooch and B.J. Sublett

On the Transfer Function of Adaptive T/4 Equalizers ............................. 260
   J.D. Wang and J.J. Werner

A New Type of Decision Feedback Equalizer ........................................ 265
   A.K. Aman and S.A Tretter

Suppression of Narrowband Interference via Signal Channel Adaptive
   Preprocessing ................................................................................ 270
   E.H. Satorius, S. Krishnan, X. Yu, L.J. Griffiths, I.S. Reed, T. Truong

Application of the SCORE Algorithm and SCORE Extensions to Sorting in the
   Rank-L Spectral Self-Coherence Environment .................................. 274
   S.V. Schell and B.G. Agee

Session TA-2: Image Modeling
Chair: Roberto Cristi
   Naval Postgraduate School, Monterey, CA

Algorithms for the Segmentation of Speckled Images .............................. 279
   H. Derin and P.A. Kelly

Shape from Shading in SAR Imagery: Experimental Results .................. 285
   R.T. Frankot and R. Chellappa

2-D Kalman Filtering for Image Restoration in the Presence of Additive and
   Signal-Dependent Degradations ..................................................... 290
   M.R. Azimi-Sadjadi and E.M. Nebot
Rendering of Texture on 3-D Surfaces ............................................. 295
   F.S. Cohen and M.S. Patel

Textured Image Segmentation - An Adaptive Edge Detection Approach .......... 300
   Z. Fan

A Parallel, Non-Parametric, Non-Iterative Clustering Algorithm with
Application to Image Segmentation ........................................... 305
   A. Khotanzad and A. Bouarfa

A Fuzzy Data-Fusion Approach to Segmentation of Color Images ............... 310
   F. Cartosio, C. Giovanelli, D.D. Giusto and G. Vernazza

A Diffusion Based Edge Detector .................................................. 315
   E. Belhaire, P. Garda, T. Bernard, F. Devos, B. Zavidovique

Session TA3: New Algorithms
Chair: Tom Alexander
North Carolina State University, Raleigh, NC

On The Design of Orthogonal Digital Filters .................................. 320
   C.T. Mullis and R.A. Roberts

Split-Levinson-type Algorithms for LS Linear-Phase Filtering and
FBPM Prediction ........................................................................ 323
   D.T.M. Slock and T. Kailath

Adaptive ARMA Lattice Based on Generalized Mullis-Roberts Criterion ....... 328
   D.W. Mennecke and M. Tummala

Filters with Small Non-Lineairties .................................................. 333
   R.J. Elliott

On Combining Decentralized Reduced Order Estimates ............................ 337
   C.S. Sims

Parameter Estimation in the Presence of Low Rank Noise ....................... 341
   R.T. Behrens and L.L. Scharf

The Explicit Analytic Cramer-Rao Bound on Angle Estimation .................. 345
   W.P. Ballance and A.G. Jaffer

Session TA4: Fast Algorithms
Chair: Delorer Etter
University of New Mexico, Albuquerque, NM

A Very High-Speed FFT Device Architecture .................................... 352
   S.A. White

Fast Updating of a Low-Rank Approximate to A Varying Hermitian Matrix .... 358
   P. Comon

A Fast Least Square Deconvolution Algorithm for Vocal Tract Cross
Section Estimation .................................................................... 363
   Y.H. Hu and P.H. Milenkovic

Reduced Bit-Rate Representation of Speech using Mixed Fourier-Walsh
Transforms .............................................................................. 366
   W.B. Mikhael and A.S. Spanias
A Prime-Factor Decomposed Algorithm for the Discrete Sine Transform .......................... 371
P. Yip and F.M. Wang

New Scaling Algorithms for the Chinese Remainder Theorem .......................... 375
M. Griffin, F. Taylor and M. Sousa

Parallel Decomposition of Complex Multipliers ........................................ 379
T. Stouraitis and A. Skavantzos

Session TA5: Technology and Computer-Aided Design for VLSI
Chair: Ray Chen
San Jose State University, San Jose, CA

Technology Trend to Manufacture Future VLSI Systems .......................... 384
S. Chiao and J. Jiang

A Hierarchical Data Structure to Support Diagnostic Testing ...................... 389
J.A. Luisi

A Topological Global Routing Algorithm for General Cells ...................... 394
D. Zhou and S.P. Chan

An Efficient Routing System for Block Layout .................................. 398
D.W. Lucas, M. Chiao, S. Srinivasan, J.P. Nguyen, R. Srinivasan
and A.L. Pandya

BLR: The Bus-Line Router ........................................................................ 402
X. Sun, D. Lin, B. Ng, Q. Jiang and R. Chen

Switch-Box Routing Based on Corner-Edge ........................................ 407
Y. Kajitani and R.R. Chen

Dynamic Control of Time-Domain Analysis in the Spice-Pac Simulation Package .......................................................... 412
W.M. Zuberek

Autoregressive Modeling of Dispersive Microstrip Transmission Lines ............. 417
E.M. Siomaccio, S.R. Parker and M. Tummala

Session TA6: Underwater Acoustic Signal Processing I
Chair: Larry Ziomek
Naval Postgraduate School, Monterey, CA

Broadband Matched Field Processing ............................................. 421
W.S. Hodakiss and R.K. Brienzo

Soft Constrained LMS Algorithms: A Robust Procedure for Signal Misalignment .......................................................... 426
G.F. Hatke and S.C. Schwartz

Optimum Array Processing and Representation of Nonstationary Random Scattering ........................................................................ 431
L.H. Sibul, M.L. Fowler and G.J. Harbison

Signal Processing for Ocean Tomography with Moving Ships ..................... 436
T.G. Birdsall, K. Metzger, Jr. and R.C. Spindel

Recursive Hough Transform Tracking for Sonar Motion Estimation ............. 440
R.L. Ricks and S. Chatterjee
Effect of Correlation on Signal Detection In Artic Under-Ice Noise ................ 445
P.A. Nielsen and J.B. Thomas

Observability Conditions for Angles-Only Tracking ................................. 451
A.N. Payne

Target Motion Analysis with Bearings and Frequencies Measurements .......... 458
J.M. Passerieux, D. Pillon, P. Blanc-Benon and C. Jauffret

Session TA7: Computer Vision
Chair: Rama Chellappa
University of Southern California, Los Angeles, CA

A 3-D Texture Model of Natural Scene Image ........................................... 463
Y. Choe and P.L. Kashyap

Mathematical Morphology and Computer Vision ........................................ 468
R.M. Haralick

Surface Reconstruction through Sequential Tracking .................................. 480
H.H. Baker

Feature-Based Motion Analysis ............................................................... 485
K.E. Price

A Computational Model of Texture Segmentation ........................................ 490
J. Malik and P. Perona

Generation of Fractal Images and Comparison of their PSDs with Several Models ................................................................. 495
P.K. Williams, D.G. Lubnau and D.F. Elliott

Uniqueness Results for Constant Acceleration and Precession Model in 3-D Motion Estimation Using a Sequence of Noisy Stereo Images .......... 500
G. Young

Volume 2 of 2

Session TP1: Neural Network Applications
Chair: Mauro Dentino
Rockwell International Corp., Anaheim, CA

Analog VLSI for Early Vision Processes ..................................................... 507
B. Mathur, H.T. Wang and C. Koch

Stochastic Learning Networks for Texture Segmentation .......................... 511
B.S. Manjunath and R. Chellappa

Application of Neural Networks to Adaptive Control .................................. 517
R.K. Elsley, M. Lan

Stereo Depth Extraction from Directional Derivative .................................. 523
C.C. Chang and S. Chatterjee

Session TP2: Image Understanding
Chair: Don Dearholt
New Mexico State University, Albuquerque, NM

Segmentation via Multiple Looks of Image Sequences using the A Priori Probability Mask ................................................................. 528
D. Park and D. Hush
Combining Segmentation and Tracking for the Classification of Moving
Objects in Video Scenes .............................................. 533
G.W. Donohoe

An Electronic Vision System for Sorting Cotton Boll Worm Pupae by Sex ...... 538
J. Jordan, J. Ellington and J. McCoy

Solid Modelling Data Structures for Computer Vision ........................ 543
J.J. Pfeiffer, Jr. and C.A Soderlund

Monotonic Search Networks for Computer Vision Databases ................. 548
D.W. Dearholt, N. Gonzales and G. Kurup

Optical Flow from Real Images ...................................... 554
F. Girosi, S. Uras, F. Tommasi and V. Torre

Fast Iteration Algorithm for Optical Flow Computation .................... 560
H. Li

Reduced Order Kalman Filtering of Moving Images ........................... 565
J.B. Burl

Session TP3: Direction of Arrival Estimation
Chair: Rabi Madan
Office of Naval Research, Washington, D.C.

GEESE (Generalized Eigenvalues Utilizing Signal Subspace Eigenvectors)
A New Technique for Direction Finding .................................. 568
S.U. Pillai and B.H. Kwon

Time Domain Implementations of the Coherent Signal-Subspace
Transformations ..................................................................... 573
S. Sivanand, J.F. Yang and M. Kaveh

Performance Analysis of Root-Music ...................................... 578
B.D. Rao and K.V.S. Hari

Multiple Invariance ESPRIT ................................................ 583
R. Roy, B. Ottersten, L. Swindlehurst and T. Kailath

Dimensionality Reduction in High Resolution Direction of Arrival Estimation
B.D. Van Veen and B.G. Williams

Maximum Likelihood and Least-Squares Broadband Source Localization in
Beam-Space ........................................................................ 593
X.L. Xu and K.M. Buckley

Direction Finding in the Presence of Mutual Coupling ....................... 598
A.J. Weiss and B. Friedlander

Cyclic Regression for Multiple Coherent Signal Estimation via the
EM Algorithm ....................................................................... 603
J.T. Ho Lo

Session TP4: Novel Architectures for DSP
Chair: Sam Stearns
Sandia National Laboratories, Albuquerque, NM
Applications of a Bit-Serial Floating-Point Complex Multiplier-Accumulator for High-Speed Digital Signal Processing ........................................... 608
K.C. Chew, W.H. Ku and J.A. Eldon

A Multiprocessor System for Real-Time Implementation of Spatial Domain Digital Filters .......................................................... 613
S. Park, W.E. Alexander and J.H. Kim

Generalized Processor-Memory Bandwidth Analysis for Fully Shared-Memory Multiprocessors ........................................... 617
D. Kim

A Modified Delta-Sigma Quantizer to Obtain High Resolution A/D Conversion with Small Excess Sample Rates ........................................... 622
F. Harris

The Architecture of VLSI Digital Signal Processors .......................................................... 626
N.R. Manohar Alers

Numerical Properties of Algorithm-Based Fault-Tolerance for High Reliability Array Processors ................................................... 631
W.G. Bliss, M.R. Lightner and B. Friedlander

Zero, Sign, and Overflow Detection Schemes for Generalized Signed-Digit Arithmetic .......................................................... 636
B. Parhami

Session TP5A: Circuit Implementation of Neural Networks
Chair: Asad Abidi
University of California, Los Angeles, CA

A Synthetic Neural Chip ................................................... 640

An Analog CMOS Backward Error-Propagation LSI .......................................................... 645
B. Furman and A.A. Abidi

Considerations for Hardware Implementations of Neural Networks ........................................... 649
S. Eberhardt, A. Moopenn, and A. Thakoor

Gaussian Convolution Analog CMOS Network for 2-D Images ........................................... 654
H. Kobayashi, J.L. White and A.A. Abidi

Session TP5B: Kharitonov's Theorem
Chair: Stanley White
Rockwell International Corp., Anaheim, CA

Bounding Adaptive Filter Poles Using Kharitonov's Theorem ........................................... 658
T.F. Brennan

Session TP6: Military Applications
Chairs: George Dillard
Naval Ocean Systems Center, San Diego, CA
Terry Rickard
Orincon Corp, San Diego, CA

Low Sidelobe Pulse Compression Waveforms .......................................................... 663
F.F. Kretschmer Jr. and K.R. Gerlach
Tomographic Radar Imaging Techniques .............................................. 668
S. Halevy

A Multi-Source Sensor Data Fusion System ........................................ 673
J.J. Fitchek, J.P. Lee and D.F. Herring

Route Optimization through Evolutionary Programming ........................ 679
D.B. Fogel and L.J. Fogel

Aggregating Template or Rule Antecedents in Real-Time Expert Systems 
with Fuzzy Set Logic ........................................................................ 681
M. O'Hagan

Height Ambiguities in Maximum Likelihood Estimation with a Multipath 
Propagation Model ........................................................................... 690
E. Bossé and R.M. Turner

Performance of the MAX Family of Order-Statistic CFAR Detectors ........ 696
J.A. Ritcey and J.L. Hines

Session TP7A: Electro Mechanical Systems with Imbedded Intelligence 
Chair: Robert J. Thomas
Cornell University, Ithaca, NY

A Summary of Estimation in Electrical Machine Systems ...................... 701
J.H. Lang

Incipient Fault Detection in DC Machines Using a Neural Network .......... 706
M. Chen, P. Mangum and R.J. Thomas

The Use of Decentralized Control on the Vibration Supression in Large 
Flexible Dynamic Systems .................................................................. 710
H.A. Ryaciotaki-Boussalis

Maximum Likelihood, Weighted Kalman and Subspace Linear Prediction 
Algorithms for System Identification .................................................. 715
Y. Hua and T.K. Sarkar

Session TP7B: Underwater Acoustic Signal Processing II 
Chair: Ralph Hippenstiel
Naval Postgraduate School, Monterey, CA

Lower Bound Analysis for Large Errors in Nonlinear State Estimation ...... 720
M.L. Graham, K.F. Gong, N.A. Jackson and J.G. Baylog

Time-Delay Estimation Using the Wigner Distribution .......................... 726
R. Rao, C. Griffin and F.J. Taylor

Session WA1: VLSI Architectures for Signal Processing 
Chair: Graham Jullien
University of Windsor, Belfast, Ireland

A Multi-Purpose VLSI Floating-Point Array Processor ......................... 730
E. Dowling, M. Griffin, M. Lynch and F. Taylor

Residue to Binary Conversion using the Core Function ......................... 735
R.E. Altschul and D.D. Miller
A Fast Multi-Valued SBNR Multiplier ........................................ B. Arnold, O. Morales and M. Andrews 738
A VQ Tree Search System Based on Bit Level Systolic Arrays .......... J.V. McCanny and M. Yan 743
A Logic Programming Approach for DSP Architectures Design ........ M.A. Bayoumi and K.M. Elleithy 753
Functional VLSI Design for Low Level Image Processing ICs .......... E. Allart, G. Quenot and B. Zavidovique 758

Session WA2: Multi-Dimensional Signal Processing Theory
Chair: Charlie Therrien
Naval Postgraduate School, Monterey, CA

2-D Constrained Harmonic Retrieval ......................................... M.H. Hayes, D.S. Mazel and D.M. Wilkes 762
2-D Noncausal AR Lattice Modeling .......................................... P. Zhao and D. Yu 767
An Iterative Algorithm for Minimum Norm Constrained Extrapolation .... L.C. Potter and K.S. Arun 771
Optimal Speckle Reduction in Polarimetric SAR Imagery ............... L.M. Novak and M.C. Burl 781
An Efficient Method in the Design of 2-D Recursive Digital Filters for Communication Systems ............................................. Q. Wei 794
Gamma Spike Circumvention Algorithm - Performance Analysis .......... H. Chung and B. Loo 798

Session WA3: Adaptive Arrays and Beamforming
Chair: Kevin Buckley
University of Minnesota, St. Paul, MN

Optimal Element Placement in Conformal Beamforming .................. R. Leahy and B. Jeffs 803
A Systematic Procedure for Implementing the Blocking Matrix in Decomposed Form ...................................................... C. Tseng and L.J. Griffiths 808
Beam-Space Processing of Broad-Band Multiple Beam Antenna Data for Source Localization ............................................. M.W. Hoffman and K.M. Buckley 813
Convergent Behavior of Modulus-Restoring Adaptive Arrays in Gaussian
Interference Environments .................................................. 818
B.G. Agee

Fast Convergence Adaptive Beamformers with Reduced Signal
Cancellation ............................................................... 823
B.K. Chang, N. Ahmed and D.H. Youn

Multiply Replicated Arrays for Direction of Arrival Estimation ........ 828
K.S. Arun and Y. Bresler

Asymptotic Results for Multidimensional Sensor Array Processing .... 833
B. Ottersten and M. Viberg

Wideband Source Location in the Time Domain .......................... 838
Y. Grenier

Session WA4A: Seismic Applications
Chair: Fred Harris
San Diego State University, San Diego, CA

Detection and Location of Seismic Events in Real Time ............... 843
J. Frederking and N. Magotra

Lp Normed Spectral Estimation Residual Analysis .................... 848
J. Schroeder and J. Endsley

Relationships Between Gain and Impulse Responses of Matrix Filters . 853
C.S. Lindquist, A.D. Ravitz and C.C. Powell

Nearly Optimal, SVD-Based Stacking of Seismic Data ................. 858
J.B. Peterson and R.D. DeGroat

Removing Seismometer Effects Using Inverse Filtering Techniques ..... 863
D.P. Kitzinger, D.R. Breding and D.M. Etter

Session WA4B: Digital Circuit Testing
Chair: Fred Harris
San Diego State University, San Diego, CA

Exploitation of Parallelism in VLSI Array Testing .................... 867
Y. Choi

A Graph-Theoretic Approach for One-Dimensional Logic Gate Assignment of VLSI Circuit Layout .............................. 872
S. Wu and S.P. Chan

Non-Classical Fault Detection in Dynamic CMOS ........................ 876
M. Singh and A. Arunachalam

Session WA5: The New Generation of DSP Devices
Chair: Les Mintzer
Rockwell International, Anaheim, CA

A 32-Bit Floating-Point DSP with C Compiler .......................... 880
J.R. Boddie, R.N. Gadenz, C.J. Garen, J.M. Huser, B. Ng and S.P. Pekarich
Enhanced Performance Single-Chip DSP Requires Minimal External Circuitry ................................................................. 885

D.A. Ash

System Applications of a New 32-Bit Floating-Point DSP Processor ................................................................. 890

D. Arison, A. Genusov and L. Gerzberg

The Weitek 64-Bit Floating-Point Datapath Unit ........................................................................................................... 898

N. Bedard, M. Birman, G. Chu, L. Hu, C.M. Lim, J. McLeod, L. Torban and F. Ware

New Directions in DSP from Texas Instruments ........................................................................................................... 903

P. Ehlig and Jim Lake

The Motorola DSP96002 IEEE Floating-Point Digital Signal Processor ................................................................. 909

G.R. Sohie

Fourier on a Chip - Performance and Applications ...................................................................................................... 914

J.A. Eldon and D.D. Hsu

Real Time Multiplication and Division for VLSI DSP ................................................................................................. 919

C.C. Stearns

Session WA6: Biomedical Signal Processing

Adaptive Filtering of Brain Evoked Potentials ........................................................................................................... 924

G. Madhavan

Knowledge-Based Interpretation of Bioelectrical Signals: Examples in EEG Analysis ......................................................... 929

J.R. Glover, Jr. and B. Dawant

Biomagnetic Imaging: A View from Fourier Space ...................................................................................................... 933

W.J. Dallas

Signal Processing Methods for Inverse Problems in Electrophysiology ........................................................................... 938

O.B. Wilson, J.W. Clark, N. Ganapathy and T.A. Benke

Adaptive Filters for Digital AGC as Applied to Abnormal Holter ECG ........................................................................ 945

A. Singh

Session WA7: Machine Vision

Motion Analysis from Three-Dimensional Profiles and the Applications ................................................................. 950

H. Lee and D.B. Goldgof

Verifying the Accuracy of Machine Vision Algorithms and Systems ........................................................................... 955

D. Petkovic, B. Dom, J. Sanz and J. Mandeville

A Vision Recognition System for High Accuracy Position Control for Laser Reconfigurable Integrated Circuits ........................................................................................................ 962

W.B. Baringer and R.W. Brodersen
Intensity Dependent Spread Filters .............................................. 967
   M.J. Silbermann and P.V. Sankar

Image Recognition by Human Decision Makers ............................ 971
   D.D. Sworder and K.S. Haaland

An Approach to Object Knowledge Representation for Image Understanding
Expert System Model ............................................................. 976
   J.H. Kim, E.H. Park and C.A. Ntuen

Subsymbolic Techniques for Perception Systems Control .............. 981
   X. Merlo and B. Zavidovique
