Keynote Speeches

Improving QoS through Network Real-Time Measurement and Self-Adaption ................ 1
  Erol Gelenbe
Wormholes of Communication: Interfacing Virtual Worlds and the Real World ............. 2
  Alessandro Campi, Georg Gottlob, and Ben Hoye
Location-Aware Authentication and Access Control—Concepts and Issues .................... 10
  Elisa Bertino and Michael Kirkpatrick

Session 1A: Performance Modelling and Evaluation 1

Evaluating the Performance of Network Protocol Processing on Multi-core
   Systems ......................................................................................................................... 16
  Matthew Faulkner, Andrew Brampton, and Stephen Pink
Modeling Web Request and Session Level Arrivals ....................................................... 24
  Xuan Wang and Katerina Goseva-Popstojanova
Predictive Simulation of HPC Applications ................................................................... 33
  S.D. Hammond, J.A. Smith, G.R. Mudalige, and S.A. Jarvis
Modelling Network Performance with a Spatial Stochastic Process Algebra .................. 41
  Vashti Galpin
 Session 1B: Routing and Broadcast Mechanisms

An Evaluation of Routing Reliability in Non-collaborative Opportunistic Networks .......................................................... 50
  Ling-Jyh Chen, Che-Liang Chiou, and Yi-Chao Chen
Parameterised Gradient Based Routing (PGBR) for Future Internet .................................................................................. 58
  Sasitharan Balasubramaniam, Dmitri Botvich, Julien Mineraud, and William Donnelly
A New Counting Scheme for Multicast Broadcast Service with WiBro ................................................................. 66
  Nak Beom Sung, Kyung Tae Kim, Sun Sik Park, and Hee Yong Youn
Analyzing the Hold Time Schemes to Limit the Routing Table Calculations in OSPF Protocol .................................................. 74
  M. Goyal, M. Soperi, H. Hosseini, K.S. Trivedi, A. Shaikh, and G. Choudhury

 Session 1C: Distributed and Parallel Systems

Real-Time Task Assignment in Heterogeneous Distributed Systems with Rechargeable Batteries ........................................... 82
  Jian (Denny) Lin, Albert M.K. Cheng, and Rashmi Kumar
Distributed Secure Virtual File System Using Hysteresis Signatures .................................................................................. 90
  Shin Tezuka, Hiroko Tomori, Ryuya Uda, and Ken-ichi Okada
Quarc: A High-Efficiency Network on-Chip Architecture ................................................................................ 98
  Mahmoud Moadeli, Partha Maji, and Wim Vanderbauwhede
Fair Scheduling with Multiple Gateways in Wireless Mesh Networks ........................................................................ 106
  Jason B. Ernst and Mieso K. Denko

 Session 2A: Service Oriented Architecture

Business Compliance Governance in Service-Oriented Architectures ........................................................................... 113
  Florian Daniel, Fabio Casati, Vincenzo D’Andrea, Emmanuel Mulo, Uwe Zdun,
  Schahram Dustdar, Steve Strauch, David Schumm, Frank Leymann, Samir Sebahi,
  Fabien de Marchi, and Mohand-Said Hacid
DAVO: A Domain-Adaptable, Visual BPEL4WS Orchestrator ............................................................................... 121
  Tim Dörnemann, Markus Mathes, Roland Schwarzkopf, Ernst Juhnke,
  and Bernd Freisleben
A Generic Database Web Service for the Venice Service Grid ................................................................................ 129
  Michael Koch, Markus Hillenbrand, and Paul Müller
Trust Requirements in Identity Federation Topologies ................................................................................ 137
  Uwe Kylau, Ivonne Thomas, Michael Menzel, and Christoph Meinel

 Session 2B: Agents and Trust Management

Combined On-line and Off-line Trust Mechanism for Agent Computing .......................................................... 146
  Babak Khosravifar, Jamal Bentahar, Maziar Gomrokchi, and Philippe Thiran
A Hybrid Layered Multiagent Architecture with Low Cost and Low Response Communication Protocol for Network Intrusion Detection Systems .................................................. 154
Varsha Sainani and Mei-Ling Shyu
An Ontology-Based Architecture for Federated Identity Management .......................................................... 162
Farah Layouni and Yann Pollet
Trust Management in Emergency Networks ....................................................................................................... 167
Arjan Durresi, Mimoza Durresi, Vamsi Paruchuri, and Leonard Barolli

Session 2C: Video Communication Technology
An Efficient FEC Allocation Algorithm for Unequal Error Protection of Wireless Video Transmission ................................................................. 175
Yoong Choon Chang, Sze Wei Lee, and Ryoichi Komiya
Adaptive FEC Algorithm Based on Prediction of Video Quality and Bandwidth Utilization Ratio ........................................................................................................................... 182
Jiao Feng, Chi Xuefen, Peng Li, Wang Yining, and Lin Guan
Content-Adaptive Robust H.264/SVC Video Communications over 802.11e Networks .............................................................. 189
Dario Gallucci, Attilio Fiandrotti, Enrico Masala, and Juan Carlos De Martin
Heterogeneous Error Protection of H.264/AVC Video Using Hierarchical 16-QAM ......................................................................................................................... 197
Ahmed B. Abdurrhman and Michael E. Woodward

Session 3A: Communication Technology and Protocols 1
Design of q-ary Irregular Repeat-Accumulate Codes .......................................................................................... 201
Wei Lin, Baoming Bai, Ying Li, and Xiao Ma
Design of Quasi-Cyclic LDPC Codes Based on Euclidean Geometries ................................................................. 207
Yuan-Hua Liu, Xin-Mei Wang, and Jian-Hua Ma
Multi-user MIMO Broadcast System Grouping Strategy Based on Particle Swarm Optimization ......................................................................................................................... 212
Hei Yong-qiang, LiXiao-hui, YiKe-chu, and Li Wen-tao
ANFIS Based AQM Controller for Congestion Control ......................................................................................................................... 217
Rafe Alasem, Alagmir Hossain, Irfan Awan, and Hussein Mansour

Session 3B: Autonomic and Advanced Network Systems
Probabilistic Network Fault-Diagnosis Using Cross-Layer Observations .......................................................... 225
Anders Nickelsen, Jesper Gronbaek, Thibault Renier, and Hans-Peter Schwefel
An Overlay Application-Layer Multicast Infrastructure ................................................................................................................................. 233
Daniel C. Uchoa, Samuel Kopp, Helcio M. Pimentel, Reinaldo Matushima, and Regina M. Silveira
A Measurement Study on Peer Behaviors for a Pure P2P Network ........................................................................ 241
Satoshi Ohzahata and Konosuke Kawashima
N-nary RAID: 3-resilient RAID Based on an N-nary Number ................................................................. 249

Katsuyoshi Matsumoto and Minoru Uehara

**Session 3C: Internet Computing and Applications**

Evaluation and Optimization of the Registrar Redundancy Handling in Reliable Server Pooling Systems .......................................................................................................................... 256

Xing Zhou, Thomas Dreibholz, Fu Fa, Wencai Du, and Erwin Paul Rathgeb

A Pipelined IP Forwarding Engine with Fast Update ........................................................................... 263

Yeim-Kuan Chang, Yen-Cheng Liu, and Fang-Chen Kuo

DINCast: Optimizing Application-Level Shared-Tree Multicast ................................................................ 270

Huaqun Guo, Lek Heng Ngoh, W.C. Wong, Ping Yang, and Nazreen Beevi

A Fast and Memory Efficient Dynamic IP Lookup Algorithm Based on B-Tree .................................... 278

Yeim-Kuan Chang and Yung-Chieh Lin

**Session 4A: Ad Hoc and Sensor Networks**

Optimized Broadcast in a Geographical Area of Wireless Ad Hoc and Sensor Networks .......................................................... 285

Ibrahim Amadou and Pascale Minet

A Resource Discovery Scheme for Large Scale Ad Hoc Networks Using a Hypercube-Based Backbone .................................................................................................................. 293

Lyes Dekar and Hamamache Kheddouci

Energy Efficiency: Optimal Transmission Range with Topology Management in Rectangular Ad-hoc Wireless Networks ................................................................................................. 301

Wei Feng, Hamada Alshaer, and Jaafar M.H. Elmirghani

Performance Analysis of OLSR and BATMAN Protocols Considering Link Quality Parameter ................. 307

Leonard Barolli, Makoto Ikeda, Giuseppe De Marco, Arjan Durresi, and Fatos Xhafa

**Session 4B: Performance Modelling and Evaluation 2**

A Communication Model of Broadcast in Wormhole-Routed Networks on-Chip .......................................................... 315

Mahmoud Moadeli and Wim Vanderbauwhede

An Experimental Evaluation of Sender-Side TCP Enhancements for Wired-to-Wireless Paths: A Real-World Home WLAN Case Study ............................................................................. 323

Ritesh Taank and Xiaohong Peng

QoS Enhancements and Performance Analysis for Delay Sensitive Applications ........................................ 331

J. Wang, L. Guan, X.G. Wang, A. Grigg, I. Awan, I. Phillips, and X. Chi

An Efficient Admission Control Methodology for Satisfying QoS Requirements in NGN Networks ................. 339

Cherif Ghazel and Leila Saïdane
Session 4C: Privacy and Trust Management

A Secure Revised Simplex Algorithm for Privacy-Preserving Linear Programming .................................................. 347
Jaideep Vaidya

Trustworthiness Assessment of Wireless Sensor Data for Business Applications .................................................. 355
Laurent Gomez, Annett Laube, and Alessandro Sorniotti

Key Management in Web of Trust for Mobile Ad Hoc Networks ..................................................................... 363
Hisham Dahshan and James Irvine

Enabling Fast Bootstrap of Reputation in P2P Mobile Networks ....................................................................... 371
Roberto G. Cascella

Session 5A: Quality of Service in Web Services

A Survey and Analysis on Semantics in QoS for Web Services ................................................................................. 379
Vuong Xuan Tran and Hidekazu Tsuji

Exploiting Request Characteristics to Improve Performance of Web Services Based Business Applications ................................................................................................................. 386
Tong Yizhu, Wang Hao, and Liu Taoying

Massively Scalable Web Service Discovery ........................................................................................................... 394
George Anadiotis, Spyros Kotoulas, Holger Lausen, and Ronny Siebes

Towards an Approach to Defining Capacity-Driven Web Service ............................................................................ 403
Zakaria Maamar, Samir Tata, Djamel Belaïd, and Khouloud Boukadi

Session 5B: Workflows and Reliability in Grid Computing

Reliability-Driven Reputation Based Scheduling for Public-Resource Computing Using GA ................................................................. 411
Xiaofeng Wang, Chee Shin Yeo, Rajkumar Buyya, and Jinsu Su

A Highly Available Grid Metadata Catalog ........................................................................................................... 419
Henrik Thostrup Jensen and Josva Kleist

Transaction Management for Reliable Grid Applications .......................................................................................... 427
Feilong Tang, Minyi Guo, Minglu Li, and Li Li

Brain Image Registration Analysis Workflow for fMRI Studies on Global Grids .................................................. 435
Suraj Pandey, William Voorsluys, Mustafizur Rahman, Rajkumar Buyya, James Dobson, and Kenneth Chiu
Session 5C: Mobile Networks and Applications

Name Resolution Middleware Using Relative Positional Relationship to Support Wireless Visible Area Communication ........................................... 443
  Atsushi Noda, Teruaki Kitasuka, Shigeaki Tagashira, Tsuneo Nakanishi, and Akira Fukuda

Data Dissemination with Drop Boxes .......................................................... 451
  Mun J. Lok, Bilal R. Qazi, and Jaafar M.H. Elmirghani

A Proposal to Enhance and Control Continuous Communications in Proxy Mobile IPv6 ................................................................. 456
  Joon-Suk Kang, Motoyuki Ohmori, and Koji Okamura

Comparative Performance Analysis of CAC Reward Optimization Algorithms in Wireless Networks .............................................. 463
  Okan Yilmaz and Ing-Ray Chen

Session 6A: Multimedia Systems and Applications

JPEG Steganography: A Performance Evaluation of Quantization Tables ................................................................. 471
  Adel Almohammad, Gheorghita Ghinea, and Robert M. Hierons

Serial and Parallel Transmission Models for Multi-source Streaming of Multimedia Objects ......................................................... 479
  Alireza Goudarzi Nemati, Tomoya Enokido, and Makoto Takizawa

PHD—A Generic and Flexible Architecture for IPTV in Authorized Domains ............................................................ 487
  Marcos Antonio Simplício Jr., Vlad Coroama, Yeda R. Venturini, Tereza Carvalho, Mats Naslund, and Makan Pourzandi

The Efficiency Method of Sanitizable Signature Scheme for SMF ................................................................. 495
  Hirokazu Miyata, Ryuya Uda, and Kenichi Okada

Session 6B: Pervasive and Ubiquitous Computing

Situation-Aware Adaptive Recommendation to Assist Mobile Users in a Campus Environment ................................................................. 503
  Amel Bouzeghoub, Kien Ngoc Do, and Leandro Krug Wives

Tracking Anonymous Sinks in Wireless Sensor Networks ................................................................. 510
  Elhadi M. Shakshuki, Tarek R. Sheltami, Nan Kang, and Xinyu Xing

Sensor Data Fusion Using DSm Theory for Activity Recognition under Uncertainty in Home-Based Care ................................................................. 517
  Hyun Lee, Jae Sung Choi, and Ramez Elmasri

A Distributed Dynamic Adaptation Model for Component-Based Applications ................................................................. 525
  M.T. Segarra and F. André
Session 6C: Security 1: Intrusion Detection Systems

Detecting Man-in-the-Middle and Wormhole Attacks in Wireless Mesh Networks .................................................................530
Stephen Mark Glass, Vallipuram Muthukkumarasamy, and Marius Portmann

Fuzzy ESVDF Approach for Intrusion Detection Systems ..................................................................................................539
Safiaa Zaman and Fakhri Karray

Correlating TCP/IP Interactive Sessions with Correlation Coefficient to Detect Stepping-Stone Intrusion .........................546
Guoqing Zhao, Jianhua Yang, Gurdeep S. Hura, Long Ni, and Shou-Hsuan Stephen Huang

Masquerade Detection Using Command Prediction and Association Rules Mining ...............................................................552
Han-Ching Wu and Shou-Hsuan Stephen Huang

Session 7A: Wireless Sensor Networks 1

Route Construction Based on Measured Characteristics of Radio Propagation in Wireless Sensor Networks .........................560
Yasuhiro Nose, Akimitsu Kanzaki, Takahiro Hara, and Shojiro Nishio

An Analytical Performance Evaluation for WSNs Using Loop-Free Bellman Ford Protocol ........................................................568
Mohammad Baharloo, Reza Hajisheykhi, Mohammad Arjomand, and Amir Hossein Jahangir

Soochang Park, Euisin Lee, Fucai Yu, Min-Sook Jin, and Sang-Ha Kim

Lessons Learned: Simulation Vs WSN Deployment ................................................................................................................580
Elhadi M. Shakshuki, Haroon Malik, and Tarek R. Sheltami

Session 7B: Security 2: New Languages and Systems

Similarity Search over DNS Query Streams for Email Worm Detection ........................................................................588
Nikolaos Chatzis and Nevil Brownlee

ReAlSec: A Relational Language for Advanced Security Engineering ..............................................................................596
Mohamed Hamdi, Nejla Essaddi, and Noureddine Boudriga

A New Video Surveillance Video Tracking System Based on Omni-directional and Network Controlled Cameras ...............602
Yousuke Sato, Koji Hashimoto, and Yoshitaka Shibata

Exclusion of Forged Files from Multi-source Downloadable P2P Systems ........................................................................608
Yuna Kim, Jong Kim, Junghei You, and Heejae Park
Session 7C: Scheduling and Routing Schemes

Packet Scheduling Algorithm with QoS Provision in HSDPA .................................................................616
   Ying-Hong Wang, Kuo-Feng Huang, and Cheng-Yi Le
A Simple Distributed ID Assignment Scheme for CSMA/IC Using Well Arranged Rotation ID in Ad Hoc Networks ........................................................................................................624
   Ki-seok Lee and Chee Ha Kim
Privacy-Aware Routing Approach for Mobile Applications ........................................................................632
   Markus Aleksy and Thomas Butter
A New Space Time Cooperative Diversity Scheme Based on Simple Feedback ........................................638
   De-chun Sun, Ke-chu Yi, and Xiao-hui Li

Session 8A: Interaction in Web Services

On the Synchronization of Web Services Interactions ..................................................................................644
   Zakaria Maamar, Quan Z. Sheng, Hamdi Yahyaoui, Khouloud Boukadi, and Xitong Li
Diagnosing Incompatibilities in Web Service Interactions for Automatic Generation of Adapters ..........652
   Y. Taher, A. Aït-Bachir, M.-C. Fauvet, and D. Benslimane
Building Distributed Index for Semantic Web Data .......................................................................................660
   Juan Li

Session 8B: Security 3: Authentication and Access Control

Advantages of User Authentication Using Unclear Images—Automatic Generation of Decoy Images .................................................................668
   Takumi Yamamoto, Atsushi Harada, Takeo Isarida, and Masakatsu Nishigaki
An Anonymous DoS-Resistant Password-Based Authentication, Key Exchange and Pseudonym Delivery Protocol for Vehicular Networks ........................................................................675
   Joseph Chee Ming Teo, Lek Heng Ngoh, and Huaqun Guo
IGMPx: Port Based Service Access Control for IP Multicast ...................................................................683
   Prashant Pillai and Yim-Fun Hu
A Hierarchical Model for Firewall Policy Extraction ....................................................................................691
   Eduardo Horowitz and Luis C. Lamb

Session 8C: WLAN, RFID and OFDM Systems

Improved 4-ary Query Tree Algorithm for Anti-Collision in RFID System .................................................699
   Yonghwan Kim, Sungsoo Kim, Seongjoon Lee, and Kwangseon Ahn
Mitigation of Intercarrier Interference Based on General Precoder Design in OFDM Systems ...............705
   Xia Wang and Shihua Zhu
An Analytical Model for MAC Protocol Configuration in WLAN ..............................................................711
   Suhaimi Bin Abd Latif, M.A. Rashid, and F. Alam
Session 9A: Networks: Scalibility, Survivability, and Recovery

Survivability in Existing ATM-Based Mesh Networks ................................................................. 719
  Isaac Woungang, Guangyan Ma, Mieso K. Denko, Alireza Sadeghian, Sudip Misra, and Alexander Ferworn

Effects of On-path Buffering on TCP Fairness ........................................................................ 725
  Saleem Bhatti and Martin Bateman

Scalability Analysis to Optimize a Network on Chip ................................................................. 733
  Marta Beltrán, Antonio Guzmán, and Fernando Sevillano

Network Voronoi Diagram Based Range Search ................................................................ 741
  Kefeng Xuan, Geng Zhao, David Taniar, Bala Srinivasan, Maytham Safar, and Marina Gavrilova

Session 9B: Wireless Sensor Networks 2

Optical Fiber Sensor Network Integrating Communication and Sensing Functions Using Hetero-core Spliced Fiber Optic Sensors ................................................................. 749
  Nobutoshi Abe, Norihiko Shinomiya, and Yoshimi Teshigawara

Sink Location Service via Inner Rectangular in Wireless Sensor Networks ....................... 758
  Hosung Park, Taehee Kim, Jeongcheol Lee, Min-Sook Jin, and Sang-Ha Kim

How Long is the Lifetime of a Wireless Sensor Network? ..................................................... 763
  Nok Hang Mak and Winston K.G. Seah

Medium Access Control in Large Scale Clusters for Wireless Sensor Networks ................ 771
  P. Barbosa, N.M. White, and N.R. Harris

Session 9C: Web Technology and Applications

Finding Influential eBay Buyers for Viral Marketing—A Conceptual Model of BuyerRank ............................................................................................................................... 778
  Hon Wai Lam and Chen Wu

Priority Scheduling of Requests to Web Portals ................................................................... 786
  D.R.W. Holton, I.U. Awan, and M. Younas

GBLT: Load Distribution Method for High Density by User Behavior in MMO Virtual Environment ......................................................................................................................... 792
  Rei Endo, Kenji Takagi, and Hiroshi Shigeno

Implementation of an E-learning System Using P2P, Web and Sensor Technologies ......... 800
  Keita Matsuo, Leonard Barolli, Fatos Xhafa, Valadi Kolici, Akio Koyama, Arjan Durrresi, and Rozeta Miho
Session 10A: Recovery and Fault Tolerance
Recoverable Cuts to Make Agreement among Peers ................................................................. 808
Ailixier Aikebaier, Valbona Barolli, Tomoya Enokido, and Makoto Takizawa
A New Ballooned Wireless Mesh Network System for Disaster Use .................................................. 816
Yoshitaka Shibata, Yosuke Sato, Naoki Ogasawara, Go Chiba, and Kazuo Takahata
Determining the Net Financial Risk for Decision Making in Business
Interactions .................................................................................................................................................... 822
Omar Hussain, Tharam Dillon, Elizabeth Chang, and Farookh Hussain
Fault-Tolerant Flocking of Mobile Robots with Whole Formation Rotation .............................................. 830
Yan Yang, Samia Souissi, Xavier Defago, and Makoto Takizawa

Session 10B: Security 4: Architectures and Protocols
Testing the Symbian OS Platform Security Architecture ........................................................................ 838
Thomas Badura and Michael Becher
A Protocol for Releasing Purpose Marks to Prevent Illegal Information Flow .............................................. 845
Tomoya Enokido, S. Misbah Deen, and Makoto Takizawa
Anomaly Detection for DNS Servers Using Frequent Host Selection ....................................................... 853
Akira Yamada, Yutaka Miyake, Masahiro Terabe, Kazuo Hashimoto, and Nei Kato
A Novel Cookie-Based DDoS Protection Scheme and its Performance
Analysis ...................................................................................................................................................... 861
Rongfei Zeng, Chuang Lin, Hongkun Yang, Yuanzhuo Wang, Yang Wang, and Peter Ungsunan

Session 10C: Grid and P2P Computing
Introducing Group Participation Support into P2P Web Caching Systems ................................................ 868
Akihiro Iwamaru, Tsuyoshi Itokawa, Teruaki Kitasuka, and Masayoshi Aritsugi
VirtCloud: Virtualising Network for Grid Environments—First Experiences .............................................. 876
David Antoš, Ludek Matyska, Petr Holub, and Jirí Sitera
Spigot: Fragment-Level File Sharing and Consistency on Grids .................................................................. 884
Po-Cheng Chen, Jyh-Biau Chang, Jia-Hao Yang, Yi-Chang Zhuang, and Ce-Kuen Shieh
DACA: Dynamic Anti-Cheating Architecture for MMOGs ...................................................................... 892
Huey-Ing Liu and Bing-Rong Tang

Session 11A: Wireless Sensor Networks 3
DCM-Arch: An Architecture for Data, Control, and Management in Wireless Sensor Networks .......................... 898
Quan Le-Trung, Amirhosein Taherkordi, Frank Eliassen, Hai Ngoc Pham, Tor Skeie, and Paal E. Engelstad
Effective Sensing Function Allocation Using a Distributed Graph Coloring
and a Slot Allocation Algorithm in Wireless Sensor Networks .................................................................. 906
Ryouhei Kawano and Toshiaki Miyazaki
A Method for Determining Weight Reset Timing in a Wirelessly Networked Array with Independently Mobile Elements .................................................................914
  William A. Lintz, John C. McEachen, and Murali Tummala

Configuring Beaconless IEEE 802.15.4 Networks Under Different Traffic Loads ..........................................................................................................................921
  D. Rohm, M. Goyal, H. Hosseini, A. Divjak, and Y. Bashir

Session 11B: Distributed Databases and Data Mining

Classification of Bloggers Using Social Annotations ..................................................................................929
  Shigeaki Sakurai, Hideki Tsutsui, and Ryohei Orihara

Supporting Complex Scientific Database Schemas in a Grid Middleware ......................................................937
  Helen X. Xiang

Utilising Multimodal Interaction Metaphors in E-learning Applications: An Experimental Study .......................945
  Marwan Alseid and Dimitrios Rigas

A New Method of Proactive Recovery Mechanism for Large-Scale Network Failures ........................................951
  Takuro Horie, Go Hasegawa, Satoshi Kamei, and Masayuki Murata

Session 11C: Communication Technology and Protocols 2

An Approach to Find Maximal Disjoint Paths with Reliability and Delay Constraints .......................................959
  Ruen-Chze Loh, Sieteng Soh, and Mihai Lazarescu

Implementation of Lightweight TCP/IP for Small, Wireless Embedded Systems ............................................965
  In-Su Yoon, Sang-Hwa Chung, and Jeong-Soo Kim

On the False-Positive and False-Negative Behavior of a Soft-State Signaling Protocol ..................................971
  Melissa Tjiong and Johan Lukkien

Author Index .........................................................................................................................................................980
