Eighth Asia-Pacific Software Engineering Conference

4–7 December 2001 • Macao, China

Organized by
University of Macau
Office for the Development of Telecommunications and Information Technology
United Nations University / International Institute for Software Technology

Sponsored by
National Natural Science Foundation of China
Macau Foundation
Public Administration and Civil Service Bureau of Macau SAR
Companhia de Telecomunicações de Macau S.A.R.L
Macau SAR Government Tourist Office

Co-organized by
Macau Productivity and Technology Transfer Center
Zhuhai Science and Technology Committee
Macau Computer Association
# Table of Contents

**Eighth Asia-Pacific Software Engineering Conference**

Message from the Conference Chairs .......................................................... x
Message from the Program Chairs .............................................................. xi
Conference Committee .............................................................................. xii
Program Committee .................................................................................. xiii
Steering Committee ................................................................................... xv
Additional Reviewers ............................................................................... xvi

---

## Keynote I

Model Checking Value-Passing Processes ............................................. 3  
*H. Lin*

## Session 1A: Formal Methods I

Using TCOZ for Modeling Web Caching ............................................. 13  
*H.N. Palit*

Analyzing the CRF Java Memory Model ............................................. 21  
*Y. Yang, G. Gopalakrishnan, and G. Lindstrom*

Program Specialisation in the Refinement Calculus .............................. 29  
*L. Groves*

## Session 1B: Tools and Environments

Formalization and 'Literate' Programming ............................................ 39  
*H. Anderson*

A Run-Time Deadlock Detector for Concurrent Java Programs ............ 45  
*Y. Nonaka, K. Ushijima, H. Serizawa, S. Murata, and J. Cheng*

XML Rule Based Source Code Generator for UML CASE Tool ............ 53  
*D.H. Park and S.D. Kim*

## Session 2A: Reactive and Real-Time Embedded Systems

Automatic Translation of a Timed Process Algebra into Dynamic State  
Graphs ................................................................................................... 63  
*J.J. Pardo, V. Valero, F. Cuartero, and D. Cazorla*

Formal Verification of Embedded Real-Time Software in Component-Based  
Application Frameworks ........................................................................ 71  
*P-A. Hsiung, W-B. See, T-Y. Lee, J-M. Fu, and S-J. Chen*

Component Identification Method with Coupling and Cohesion ............ 79  
*J.K. Lee, S.J. Seung, S.D. Kim, W.H. Jang, and D.H. Han*
Session 2B: System Modeling and Design Methodology
The Canonical Functional Design Based on the Domination-Relationship among Data ................................................................. 89
S. Kundu
Aspect-Oriented Implementation of Software Health Indicators ................................................................. 97
J. Thai, B. Pekilis, A. Lau, and R. Seviora
Specification of Distributed Systems with a Combination of Graphical and Formal Languages ......................... 105
E.B. Johnsen, W. Zhang, O. Owe, and D.B. Aredo

Session 3A: Software Architecture and Framework
Architectural Design for Evolution by Analyzing Requirements on Quality Attributes ...................................................... 111
T. Kishi, N. Noda, and T. Katayama
A Formal Framework to Build Software Agents ................................................................. 119
M.R. Patra and H. Mohanty
Trading-Assisting Service Discovery Architecture ......................................................................................... 127
T. Senivongse and W. Suphasanhtitikul

Session 3B: Requirements Engineering
Using Default Reasoning to Discover Inconsistencies in Natural Language Requirements ........................................... 133
D. Zowghi, V. Gervasi, and A. McRae
A Model for Navigating Interview Processes in Requirements Elicitation ......................................................... 141
An Empirical Study of Requirements Engineering in Distributed Software Projects: Is Distance Negotiation More Effective? ................................................................. 149
D. Damian

Keynote II
Formalizing Models and Meta-models for System Development ................................................................. 155
R. Venkatesh, P. Bhaduri, and M. Joseph

Session 4A: Formal Methods II
Operational Semantics for Verilog ......................................................................................................................... 161
J. Dimitrro
Formal Specification of Mixed Components with Korrigan ......................................................................................... 169
C. Choppy, P. Poizat, and J-C. Royer
Deriving Operational Semantics from Denotational Semantics for Verilog ................................................................................................................................. 177
H. Zhu, J. Bowen, and J. He
Session 4B: Software Management and Planning

Scheduling Software Projects to Minimize the Development Time and Cost with a Given Staff

F. Padberg

Improving the Testing Process by Program Static Analysis

N. Kikuchi and T. Kikuno

Tailoring and Verifying Software Process

I-C. Yoon, S-Y. Min, and D-H. Bae

Session 5A: Software Testing Techniques

A Rigorous Method for Testing Real-Time Reactive Systems

V.S. Alagar and M. Zheng

The Design and Implementation of Automata-based Testing Environment for Java Multi-thread Programs

H-S. Seo, I.S. Chung, B.M. Kim, and Y.R. Kwon

An Effective Testing Technique for Component Composition in EJBs

H. Yoon and B. Choi

On Path-Wise Automatic Generation of Test Data for Both White-Box and Black-Box Testing

J-H. Shan, J. Wang, and Z-C. Qi

Session 5B: Object-Oriented Analysis and Design

On the Implementation of Catalysis Frameworks in COM

S.M. Ho and K-K. Lau

A Requirements Description Metamodel for Use Cases

T. Nakatani, T. Urai, S. Ohmura, and T. Tamai

Formal Object-Oriented Analysis and Design of an Online Ticketing System

X. Li, Z. Liu, and Z. Guo

Applying Mutation Analysis for Object-Oriented Programs Using a Reflective Approach

P. Chevalley

Session 6A: Software Maintenance

A Slicing Method for Object-Oriented Programs Using Lightweight Dynamic Information

F. Ohata, K. Hirose, M. Fujii, and K. Inoue

Expert Maintainers' Strategies and Needs when Understanding Software: A Case Study Approach

C. Tjortjis and P. Layzell
Session 6B: Formal Methods III

The Steam Boiler in a Unified Theory of Z and CSP ................................................................. 291
  J. Woodcock and A. Cavalcanti

Formal Framework for a Generic Combination of a Process Algebra
  with an Algebraic Specification Language .................................................................................. 299
  G. Salain, M. Allemand, and C. Attigbé

Keynote III

Orchestrating Computations on the World-Wide Web ................................................................. 305
  J. Misra and H. Vin

Session 7A: Formal Methods IV

Partitioning Program into Hardware and Software ........................................................................ 309
  S. Qin and J. He

A Probabilistic Approach to Automatic Verification of Concurrent
  Systems ......................................................................................................................................... 317
  E. Tronci, G.D. Penna, B. Intrigila, and M.V. Zilli

A Theory of Combinational Programs ............................................................................................ 325
  V.D. Tran and J. He

Using a Scenario Model to Derive the Functions of a Formal
  Specification ................................................................................................................................. 329
  M.V. Mauco, D. Riesco, and C. George

Session 7B: Software Architecture and Framework

Quality Requirement Elicitation for the Architecture Evaluation of Process Computer Systems . . . . 335
  J.J. Lee, S. Ha, K.C. Kang, Y. Choo, Y. Hong, and H. Hwang

Architectural Issues in Mobile Augmented Reality Systems: A
  Prototyping Case Study .................................................................................................................. 341
  A.H. Dutoit, O. Creighton, G. Klinker, R. Kobylnski, C. Vilsmeier, and B. Bruegge

Development of Session Management Mechanism for Cellular Phone
  with WWW Connection .................................................................................................................. 345
  S. Uehara, O. Mizuno, and T. Kikuno

Keynote IV

Cost Analysis of Games, Using Program Logic .............................................................................. 351
  C. Morgan and A. McIver

Session 8A: Formal Methods V

Compilation of Specifications ........................................................................................................... 355
  C.J. Fidge
Model Checking UML Statecharts ................................................................. 363
  W. Dong, J. Wang, X. Qi, and Z-C. Qi

Automatic Synthesis of the DC Specifications of Lip Synchronisation Protocol ................................................................. 371
  H. Ma, L. Li, J. Wang, and N. Zhan

Session 8B: Reengineering and Reverse Engineering

Identifying Candidate Objects Using Hierarchical Clustering Analysis ................................................................. 381
  S. Phattarsukol and P. Muenchaisri

A Framework for Migrating Procedural Code to Object-Oriented Platforms ................................................................. 390
  Y. Zou and K. Kontogiannis

An Automatic Restructuring Approach Preserving the Behavior of Object-Oriented Designs ................................................................. 400
  B. Lee and C. Wu

Session 9A: Component-Based Design Techniques/Empirical Studies

A Component-Based Framework and Reusability in Garment ................................................................. 411
  N. Zhang and Y. Liu

Component Metrics to Measure Component Quality ................................................................. 419
  E.S. Cho, M.S. Kim, and S.D. Kim

Knowledge Scouts: Reducing Communication Barriers in a Distributed Software Development Project ................................................................. 427
  A.H. Dutoit, J. Johnstone, and B. Bruegge

Framework for Third Party Testing of Component Software ................................................................. 431
  Y-S. Ma, S-U. Oh, D-H. Bae, and Y-R. Kwon

Session 9B: Formal Methods VI

Z>User Studio: An Integrated Support Tool for Z Specifications ................................................................. 437
  H. Miao, L. Liu, C. Yu, J. Ming, and L. Li

Model Checking Object-Z Classes: Some Experiments with FDR ................................................................. 445
  G. Kassel and G. Smith

An XML/XSL Approach to Visualize and Animate TCOZ ................................................................. 453
  J. Sun, J.S. Dong, J. Liu, and H. Wang

Author Index ................................................................................................................................. 461
