# Table of Contents

**15th Asia-Pacific Software Engineering Conference**

Message from the General Chairs ........................................................................ x
Message from the Program Committee Chairs .................................................. xi
Conference Organization and Committees ......................................................... xii
Program Committee .......................................................................................... xiii
Reviewers ........................................................................................................... xv

## Keynote Speech Abstracts

Using Abstraction to Verify Arbitrary Temporal Properties .............................. 3
*Amir Pnueli*

Beyond Agile: Smart ......................................................................................... 4
*Ivar Jacobson*

Service Refinement .......................................................................................... 5
*Jifeng He*

## Session 1A: Program Analysis and Understanding (I)

Early Filtering of Polluting Method Calls for Mining Temporal Specifications .... 9
*Hao Zhong, Lu Zhang, and Hong Mei*

DRACULA: Detector of Data Races in Signals Handlers .................................... 17
*Takamitsu Tahara, Katsuhiko Gondow, and Seiya Ohsuga*

Detection of Diverse Design Pattern Variants ................................................. 25
*Krzysztof Stencel and Patrycja Wegrzynowicz*

An Empirical Study of Unused Design Decisions in Open Source Java Software .................. 33
*Ewan Tempero*
Session 1B: Software Process Improvement (I)

A Dynamic Model of Software Product Generative Process
Giulio Concas, Michele Marchesi, Sandro Pinna, Roberto Tonelli, and Ivana Turnu

A Case Retrieval Method for Knowledge-Based Software Process Tailoring Using Structural Similarity
Dongwon Kang, In-Gwon Song, Seunghun Park, Doo-Hwan Bae, Hoon-Kyu Kim, and Nobok Lee

Software Process Simulation Modeling: Facts, Trends and Directions
He Zhang, Barbara Kitchenham, and Dietmar Pfahl

An Investigation on Performance of Software Enhancement Projects in China
Mei He, Ye Yang, Qing Wang, and Mingshu Li

Session 1C: Software Maintenance and Evolution (I)

A Nonlinear Approach to Modeling of Software Aging in a Web Server
Yun-Fei Jia, Lei Zhao, and Kai-Yuan Cai

Towards Unanticipated Runtime Adaptation of Java Applications
Mario Pukall, Christian Kästner, and Gunter Saake

Correctness of Request Executions in Online Updates of Concurrent Object Oriented Programs
Yogesh Murarka and Umesh Bellur

Risks and Risk Management in Software Architecture Evolution: An Industrial Survey
Odd Petter N. Slyngstad, Reidar Conradi, M. Ali Babar, Viktor Clerc, and Hans van Vliet

Session 2A: Formal Methods (I)

A Technique to Check the Implementability of Behavioral Specifications with Frameworks
Teruyoshi Zenmyo, Takashi Kobayashi, and Motoshi Saeki

Execution Semantics for rCOS
Zheng Wang, Xiao Yu, Geguang Pu, Libo Feng, Huibiao Zhu, and Jifeng He

A Heap Model for Java Bytecode to Support Separation Logic
Chenguang Luo, Guanhua He, and Shengchao Qin

Flexible Generation of Pervasive Web Services Using OSGi Declarative Services and OWL Ontologies
Klaus Marius Hansen, Weishan Zhang, and João Fernandes

Session 2B: Software Testing (I)

Jata: A Language for Distributed Component Testing
Ji Wu, Liu Yang, and Xu Luo

Specification-Based Approach to Select Regression Test Suite to Validate Changed Software
Ravi Prakash Gorthi, Anjaneyulu Pasala, Kailash KP Chanduka, and Benny Leong

A Novel Optimum Data Duplication Approach for Soft Error Detection
Jianjun Xu, Qingping Tan, and Rui Shen

Providing the Guideline of Determining Quality Checklists Priorities Based on Evaluation Records of Software Products
Chongwon Lee, Byungjeong Lee, and Chisu Wu
Session 2C: Software Product-Line Engineering

SimPL — A Simple Software Production Line for End User Development .......................................................... 179
Andreas Malaer and Matthias Lampe

Measuring Non-Functional Properties in Software Product Lines for Product Derivation ................................. 187
Norbert Siegmund, Marko Rosenmüller, Martin Kuhlemann, Christian Kästner, and Gunter Saake

Scheduling Product Line Features for Effective Roadmapping .................................................................................. 195
Juha Savolainen and Juha Kuusela

AORE (Aspect-Oriented Requirements Engineering) Methodology for Automotive Software Product Lines .................................................................................................................. 203
Mikio Aoyama and Atsuko Yoshino

Session 3A: Program Analysis and Understanding (II)

Documenting and Evaluating Scattered Concerns for Framework Usability: A Case Study ................................ 213
Daqing Hou, Chandan Raj Rupakheti, and H. James Hoover

Inferring Specifications of Object Oriented APIs from API Source Code ......................................................... 221
Hao Zhong, Lu Zhang, and Hong Mei

A Comparison of the Reliability Growth of Open Source and In-House Software .............................................. 229
Sharifah Mashita Syed-Mohamad and Tom McBride

Session 3B: Software Process Improvement (II)

A Source-Code Based Extraction Way for Micro Processes Influencing Software Complexity .............................. 239
Noriko Hanakawa

Mining Individual Performance Indicators in Collaborative Development Using Software Repositories ............... 247
Shen Zhang, Yongji Wang, and Junchao Xiao

Towards Analyzing Information Management Requirements in New Zealand Genetic Services ............................. 255
Yulong Gu and James Warren

Session 3C: Verification and Validation (I)

Modeling and Analysis of WS-BPEL Business Processes Based on ServiceNet .................................................. 265
Haiqiang Dun, Wen Zhao, Yu Huang, Shikun Zhang, and Lifu Wang

Emergent Properties in Reactive Systems ............................................................................................................. 273
Marc Aiguier, Pascale Le Gall, and M’Barka Mabrouki

Detection of a Set of States in Distributed Systems .............................................................................................. 281
Hongtao Huang

Session 4A: Requirement Engineering

A Measurement-Driven Process Model for Managing Inconsistent Software Requirements ................................. 291
Kedian Mu, Zhi Jin, and Didar Zowghi

Behavioral Specification of Real-Time Requirements ............................................................................................... 299
Seyed Morteza Babamir and Faezeh Sadat Babamir

Jackson’s JSP-Like Method for State Transition Design ......................................................................................... 307
Osamu Shigo
Session 4B: Software Engineering Education

Software Engineering Education Toolkit for Embedded Software Architecture
Design Methodology Using Robotic Systems

Dongsun Kim, Suntae Kim, Seokhwan Kim, and Sooyong Park

Investigating Pair Programming in a Software Engineering Course in an Asian Setting

Raymund Sison

Session 4C: Verification and Validation (II)

Extending PSC for Monitoring the Timed Properties in Composite Services

Pengcheng Zhang, Bixin Li, Zhiyong Su, and Mingjie Sun

Formalization and Consistency Checking of Changes of Software System Configurations Using Alloy

Hiroaki Tanizaki and Takuya Katayama

Modeling and Verifying Web Browser Interactions

Shengbo Chen, Huaikou Miao, and Zhongsheng Qian

Session 4A: Formal Methods (II)

Deadlock-Detection in Java-Library Using Static-Analysis

Vivek K. Shanbhag

Iterative Model Fixing with Counterexamples

Tsutomu Kumazawa and Tetsuo Tamai

Model Checking Process with Goal Oriented Requirements Analysis

Hideto Ogawa, Fumihiro Kumeno, and Shinichi Honiden

A Verification Framework for FBD Based Software in Nuclear Power Plants

Junbeom Yoo, Sungdeok Cha, and Eunkyung Jee

Session 5A: Software Architecture and Service Oriented Architecture

Resource-Oriented Architecture for Business Processes

Xiwei Xu, Liming Zhu, Yan Liu, and Mark Staples

A Design Quality Model for Service-Oriented Architecture

Bingu Shim, Siho Choue, Suntae Kim, and Sooyong Park

SA@Work — A Field Study of Software Architecture and Software Quality at Work

Kari Rye Schougaard, Klaus Marius Hansen, and Henrik Baerbak Christensen

Service Identification Using Goal and Scenario in Service Oriented Architecture

Suntae Kim, Minseong Kim, and Sooyong Park

Session 5B: Software Maintenance and Evolution (II)

Using ES Based Automated Software Clustering Approach to Achieve Consistent Decompositions

Bilal Khan and Shaleeza Sohail

Component-Based Software Update Process in Collaborative Software Development

Tien N. Nguyen

Security-Aware Refactoring Alerting its Impact on Code Vulnerabilities

Katsuhide Maruyama and Kensuke Tokoda

Detecting Occurrences of Refactoring with Heuristic Search

Shinpei Hayashi, Yasuyuki Tsuda, and Motoshi Saeki
Session 6A: Software Testing (II)

G2Way — A Backtracking Strategy for Pairwise Test Data Generation
Mohammad F.J. Klaib, Kamal Z. Zamli, Nor Ashidi M. Isa, Mohammed I. Younis, and Rusli Abdullah
463

Test Case Prioritization Based on Analysis of Program Structure
Zengkai Ma and Jianjun Zhao
471

Modular Conformance Testing and Assume-Guarantee Verification for Evolving Component-Based Software
Pham Ngoc Hung and Takuya Katayama
479

Early Estimate the Size of Test Suites from Use Cases
Qu Yi, Zhou Bo, and Zhu Xiaochun
487

Session 6B: Software Metrics and Measurement

Theoretical Maximum Prediction Accuracy for Analogy-Based Software Cost Estimation
Jacky W. Keung
495

The Use of a Meta-Model to Support Multi-Project Process Measurement
Alberto Colombo, Ernesto Damiani, Fulvio Frati, Sergio Oltolina, Karl Reed, and Gabriele Ruffatti
503

A Complexity Metric for Web Applications Based on the Entropy Theory
Woosung Jung, Eunjoo Lee, Kapsu Kim, and Chisu Wu
511

Automated Support for Software Cost Estimation Using Web-CoBRA
Jacky Keung and Ross Jeffery
519

Session 6C: Aspect-Oriented and Domain-Specific Software Development

Aspect-Oriented Programming for Web Controller Layer
Keiji Hokamura, Naoyasu Ubayashi, Shin Nakajima, and Akihito Iwai
529

Flexible Aspect-Oriented Design Model Checking
Wuwei Shen and W. Eric Wong
537

Management of Composites in Software Engineering Environments
Jacky Estublier, German Vega, and Thomas Leveque
545

Domain Specific Engineering Environments
Jacky Estublier, German Vega, Philippe Lalande, and Thomas Leveque
553
