Message from the Workshop Organizers

RAMSS 2013

The First International Workshop “Statistical methods in Reliability Assessment of Complex Industrial and Multi-state Systems” will serve as a forum for discussing different issues of Stochastic Models and Methods in different aspects of Reliability and Availability Assessment of Complex Industrial and Multi-state Systems. The idea of the Workshop is to assemble researchers and practitioners from universities, institutions, industries, businesses and government, working in these fields.

Topics of interest include:

- Reliability, safety and quality improvement
- Reliability and Availability Assessment of Multi-state and Continuous-state Systems
- Recent advance in statistical inference
- Stochastic modeling
- Data mining and warehousing
- Database and Datawarehouse Reliability.

I wish all participants an enjoyable workshop, and challenging and interesting discussions.

Ilia Frenkel, Sami Shamoon College of Engineering, Israel
