The Second International Workshop on Emerging Cyberthrets and Countermeasures (ECTCM 2014)

Welcome Message from Workshop Organizers

Welcome to ECTCM 2014!

In 2013, after several more informal workshops on IT early warning from 2009 to 2011, we decided to get into a more formal structure and successfully organized the First International Workshop on Emerging Cyberthrets and Countermeasures co-located with the International Conference on Availability, Reliability and Security (ARES 2013) in Regensburg, Germany. In winter 2013 we received an invitation from Edgar Weippl to reorganize ECTCM as part of ARES 2014 which we happily accepted. And here we are today, presenting a hopefully interesting workshop program covering various cutting-edge topics of cybersecurity like (anti) malware research, network security and identity protection.

We want to thank all authors who submitted a paper to ECTCM 2014 and all reviewers for their willingness to support the second incarnation of this workshop. We are grateful for their sincere and hard work. Furthermore many thanks to the ARES organizing people (especially Yvonne Poul and Edgar Weippl) who made organizing this workshop as easy as possible!

We hope you enjoy reading the accepted papers and that they may inspire you for future research in the fields of emerging cyberthrets and countermeasures!

See you next time!
