The Second International Workshop on Security in ATM and other Critical infrastructures (SecATM 2014)

Welcome Message from Workshop Organizers

Global air traffic management is evolving from siloed, local, proprietary systems to interconnected wide-area information systems. There is rapid development, as demonstrated by the FAA NextGen and the European Single European Sky ATM Research programme. Increased automation and interconnection also translates into increased security risks, and this workshop will focus on security of next-generation air traffic management systems and similar critical information infrastructures.

This year’s workshop features 7 papers, all of which have undergone a review of at least two experts in the field.

The SecATM 2014 organizing Committee

Rainer Kölle, Lancaster University, UK (Chair)
Martin Gilje Jaatun, SINTEF ICT, Norway
John Hird, Eurocontrol, Belgium
