Welcome Message from Workshop Organizers

The goal of the First International Workshop on Agile Secure Software Development (ASSD) is to bring together security and software development researchers to share their finding, experiences, and positions about developing secure software using the agile methods. The workshop aims to encourage the use of scientific methods to investigate the challenges related to the use of the agile approach to develop secure software. It aims also to increase the communication between security researchers and software development researchers to enable the development of techniques and best practices for developing secure software using the agile methods.

We have received this year 6 papers, from which we accepted 4 papers for publication. We thank the members of the Program Committee for their support, and all the authors for their contribution to the workshop. Each paper has been reviewed by minimum 3 members of the Program Committee. We have assembled a nice program to challenge the participants and stimulate the discussion.

We hope you will enjoy it!

The Workshop organizing committee

Juha Röning, University of Oulu, Finland
Lotfi ben Othmane, Fraunhofer SIT, Germany
